

Onboarding / Introductory Report

1. Introduction

I am Shreyas Reddy, a final semester Electronics and Communication Engineering (ECE) student at the Vemana Institute of Technology. In the course of my educational pursuit, I have acquired considerable knowledge and skills, along with a high degree of creativity. Though my main focus has been on the fields of electronics, communication, and embedded systems, I have always been passionate about the creation of visual concepts.

I find the development of imaginative concepts such as game characters, game guns, and other fictional concepts quite fascinating. This has led me to the development of a serious interest in the field of graphic designs. I wanted to acquire considerable knowledge regarding the tools, techniques, and art that go into the development of professional visual productions. This has led me to develop the aim of enhancing my skills, enabling me to pursue a career in a field that genuinely interests and motivates me.

2. Reason for Selecting Edutainer for the Internship

I chose Edutainer for my internship because my colleague is currently undertaking his internship in the domain of UX Design, just as I am undertaking my program in the graphics design field. My colleague told me that the program was quite affordable, and he had heard a lot of positive online reviews about the institute.

Another reason I chose Edutainer is because of the cost of the program. Being a student, I looked for a program that was quite affordable, yet offered quality training. Out of all the programs I came across, Edutainer was among the few programs located near my area and was listed on the VTU portal too. Out of all the options, Edutainer was the only program that met my geographical and financial needs, hence the reason I chose it..

3. Why I Chose Graphic Designing as My Internship Domain

Graphic design has remained a field that has captured my attention and interest. For example, when I see posters, adverts, social media designs, and game designs, I have often found myself wondering what design process is involved in creating them. What design tools were used? What colour combinations did they use? How did they come up with a design that is both visually appealing and informative?

This has prompted me to select graphic design as my internship domain. I am interested in understanding the creative process involved in designing, which is a key aspect in a professional setting. As a result, I expect that upon completing my internship, I will be able to improve my knowledge and understanding, enabling me to come up with designs that are both visually appealing and informative.

4. My Future Goals

My immediate goal is to explore graphic designing as a professional career option. I want to work as a graphic designer and gain real-world experience to understand whether it is the right long-term career path for me. I believe that practical exposure will help me evaluate my strengths, interests, and growth opportunities in this field.

If I find that graphic design aligns well with my skills and passion, I would like to continue building my career in this domain. However, I also have a strong academic background in electronics, and as an alternative plan, I am considering pursuing a master's degree in VLSI design. VLSI is a specialized field in electronics that focuses on chip design and semiconductor technology, and it offers promising career opportunities. I want to keep both options open while I explore my interests and strengths.

5. Conclusion

In conclusion, I am a final year ECE student with a strong passion for creativity and visual design. My internship in Edutainer can be considered a major step in my journey to explore the field of graphic design as a possible future profession. I look forward to learning, developing my skills, and gaining practical knowledge in my field of study during my internship period. I believe this will greatly assist me in deciding my future direction in life.
