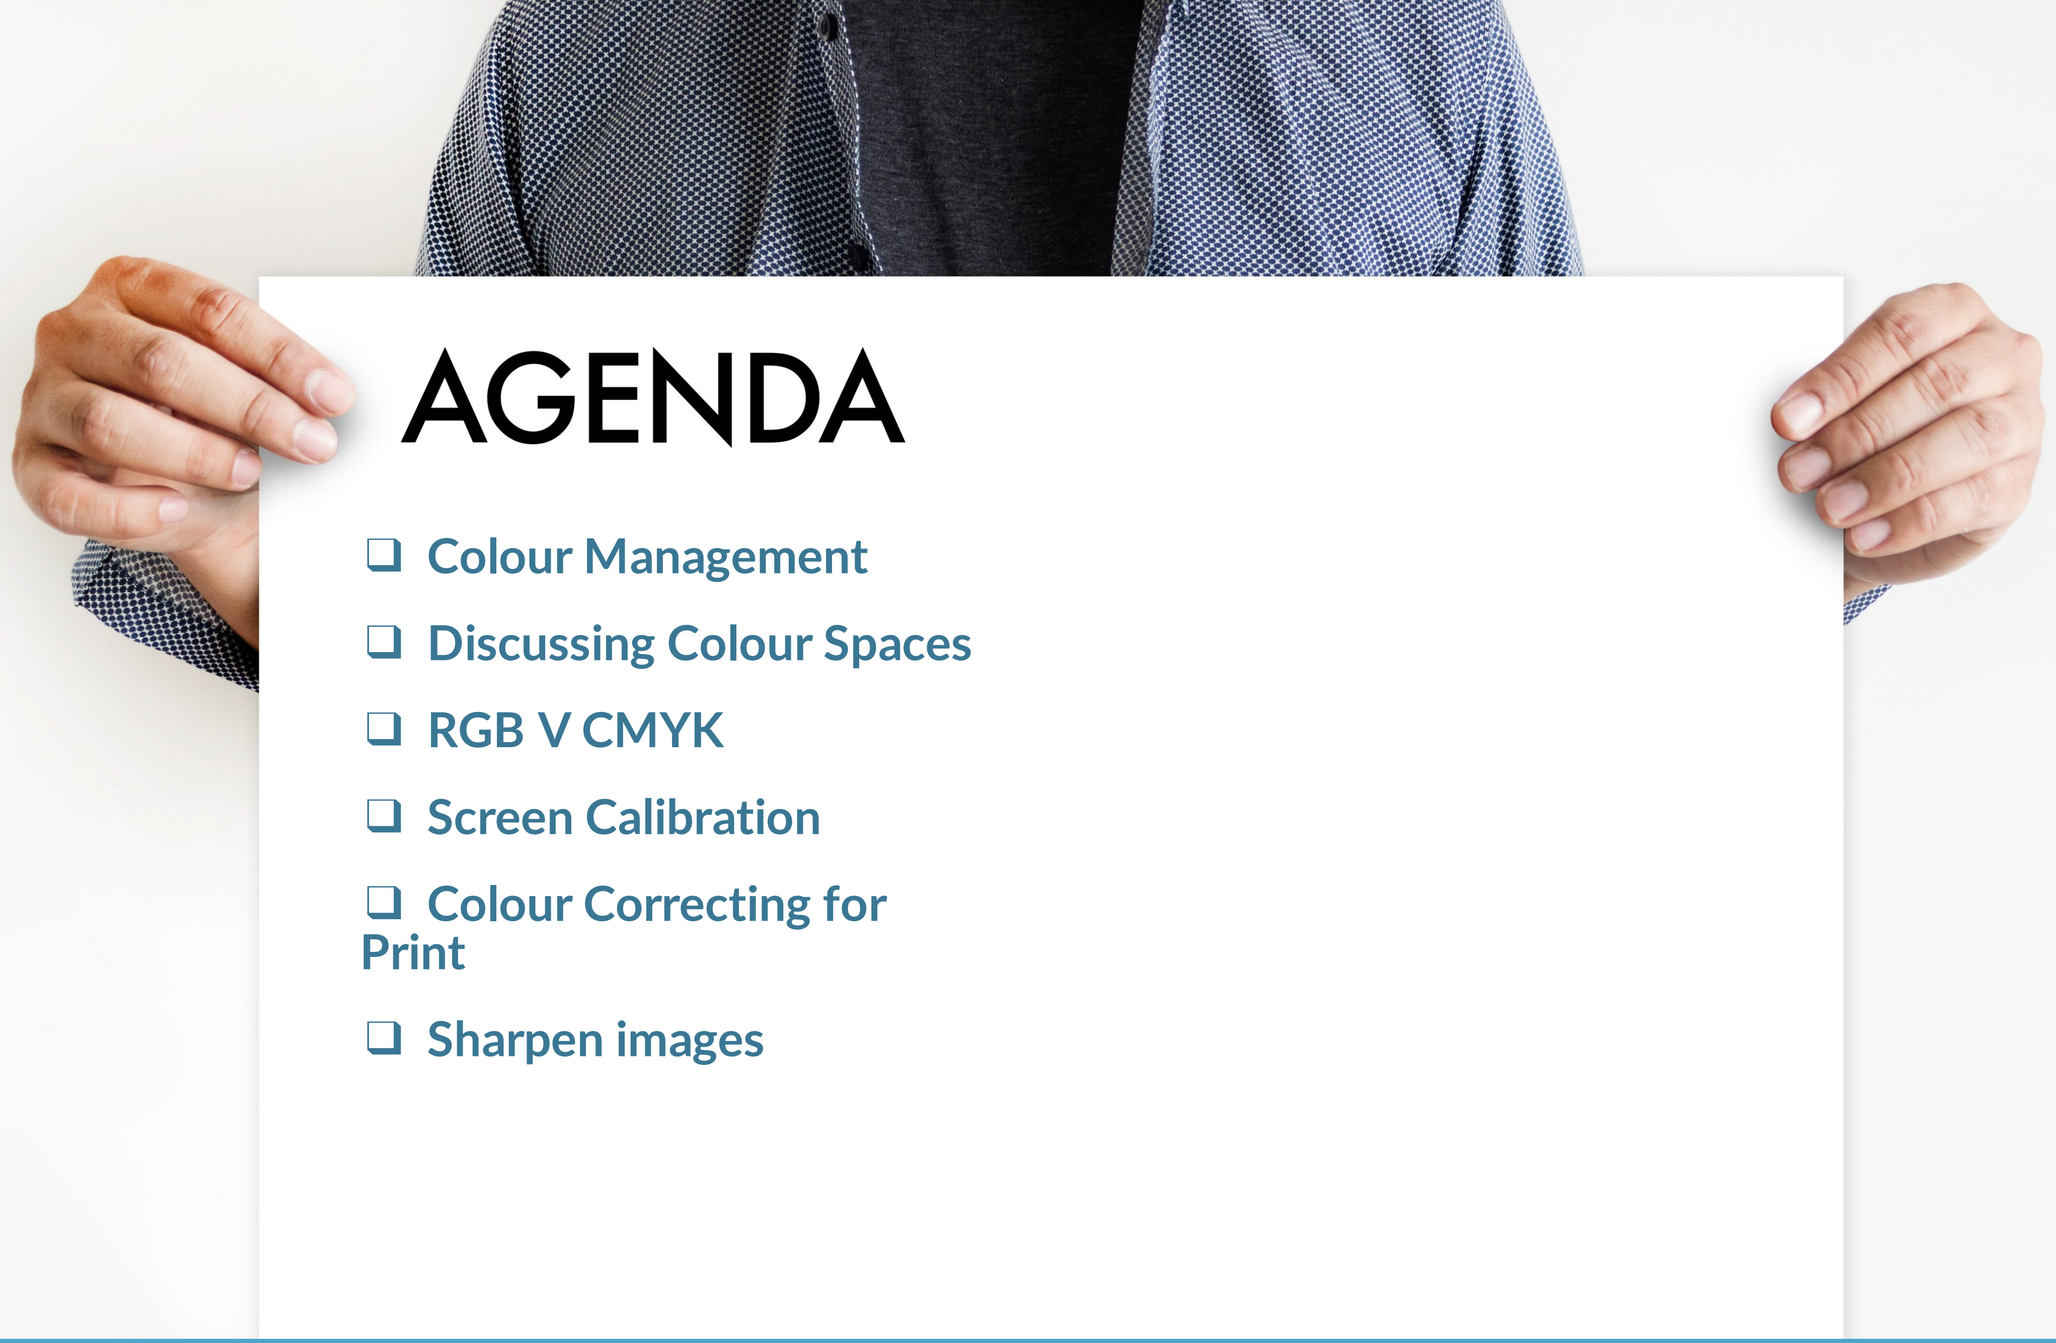
Diploma in Photoshop

Lesson 31
Creative Photoshop

Sharping & Output



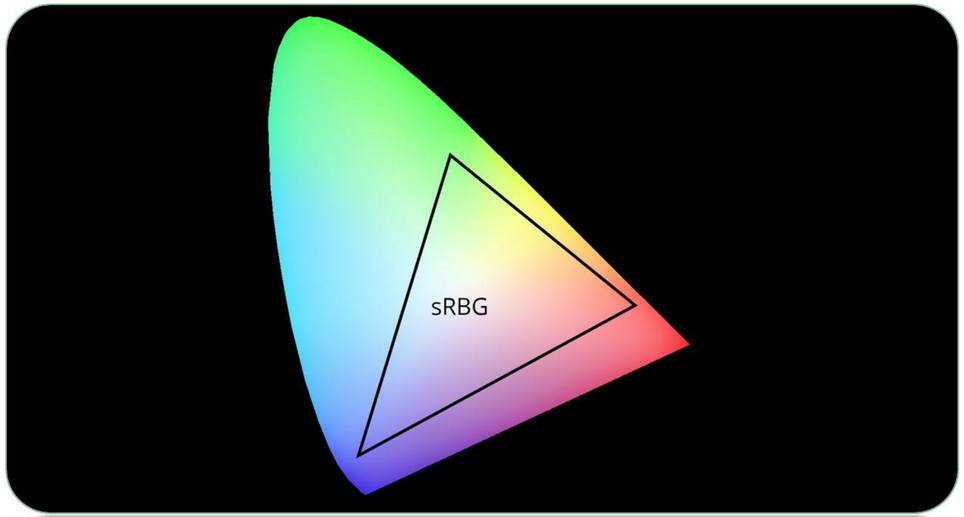
AGENDA

- ❑ Colour Management
- ❑ Discussing Colour Spaces
- ❑ RGB V CMYK
- ❑ Screen Calibration
- ❑ Colour Correcting for Print
- ❑ Sharpen images

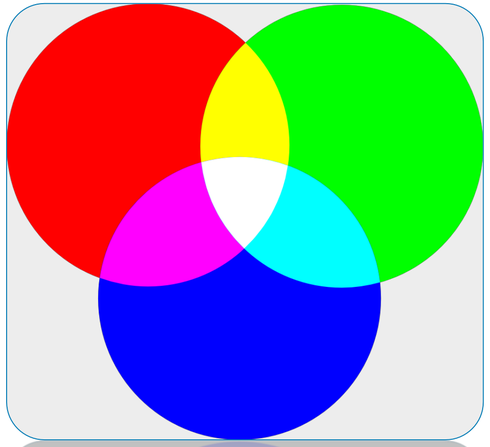
Colour Management

What is a “Colour Space”?

In layman's terms, a colour space is just a specific range of colours that we can use to illustrate our photo. A narrow colour space will have a limited amount of colours it can draw from to make up a photo, while a wide colour space will have a much higher number of colours it can draw from the make up our photo



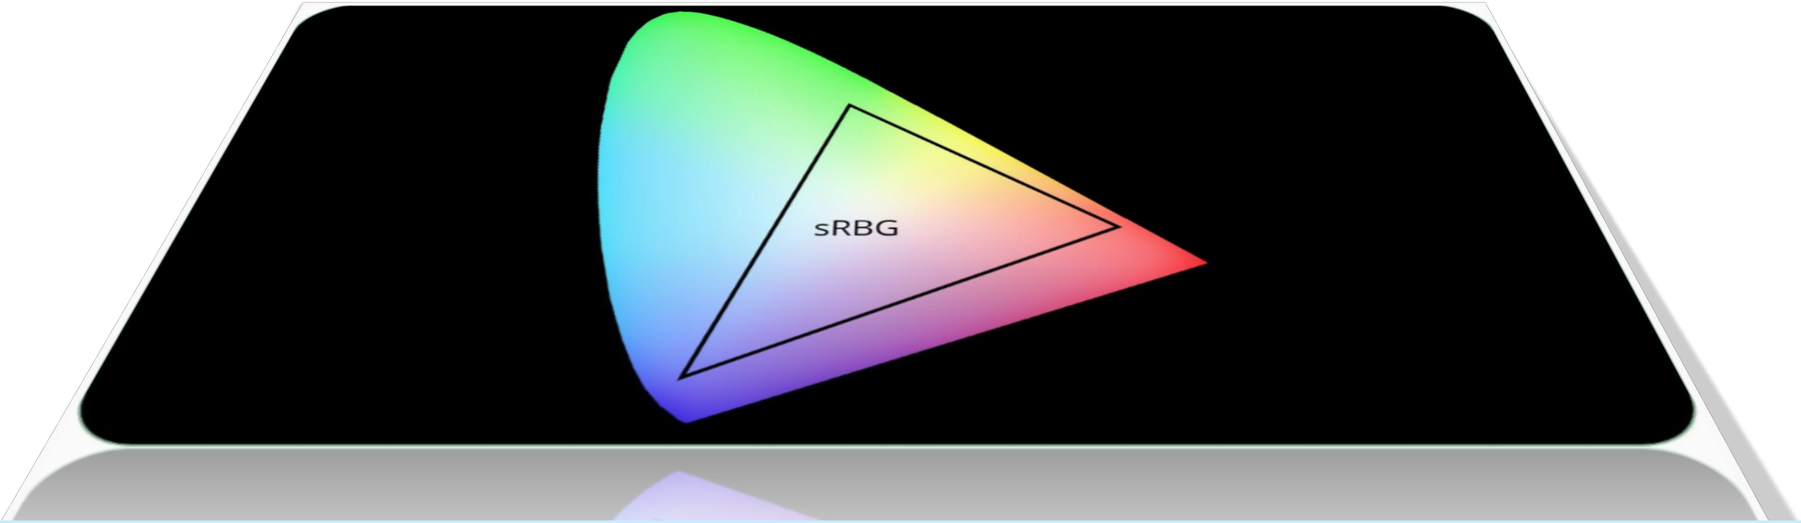
RGB



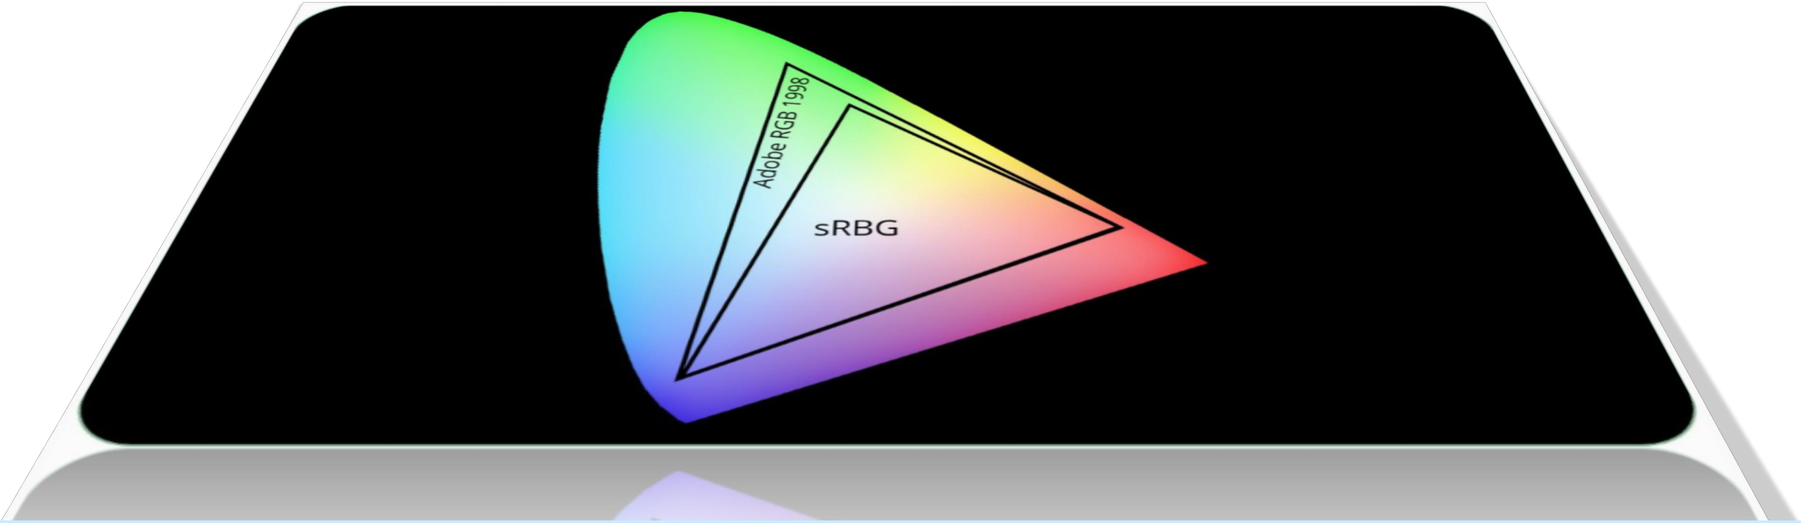
Red, Green, Blue
(Additive Colours)

- sRGB
- Adobe RGB 1998
- ProPhoto

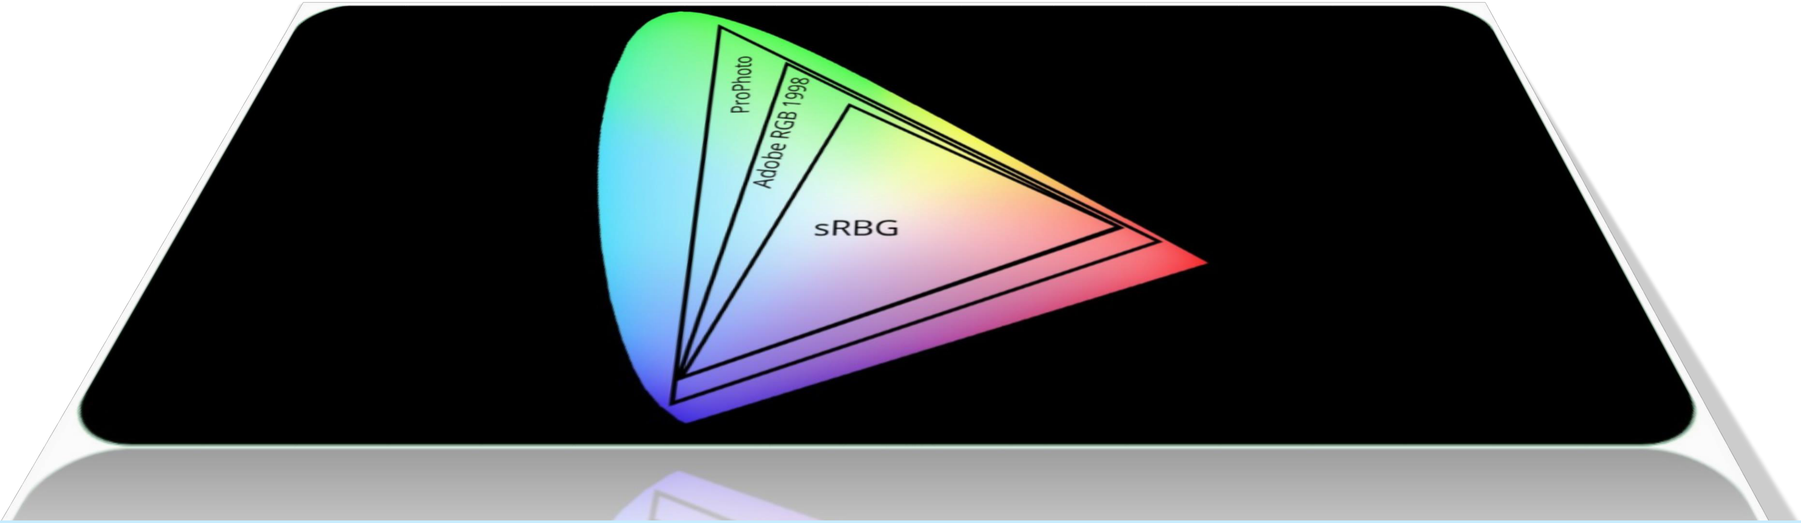
Colour Management: sRGB



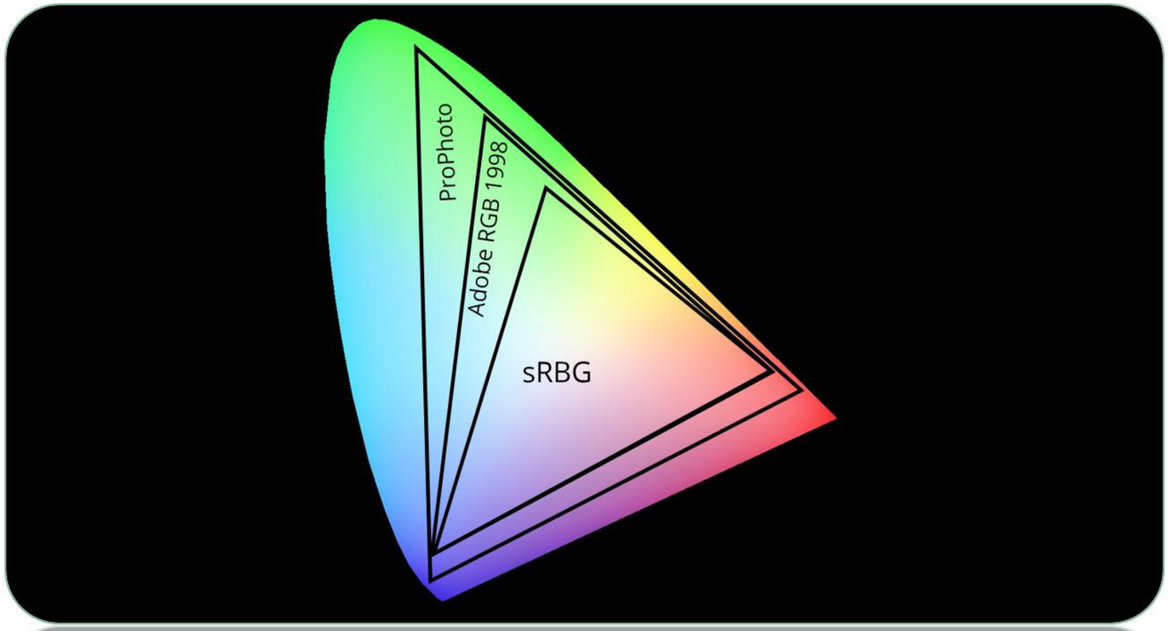
Colour Management: Adobe RGB 1998

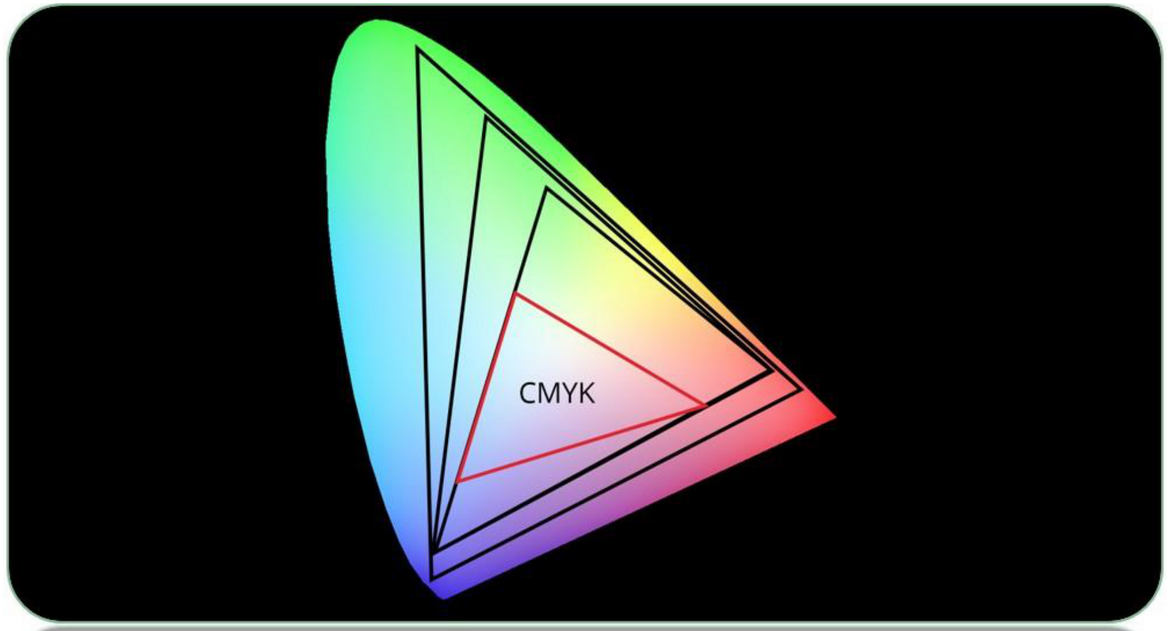


Colour Management: ProPhoto



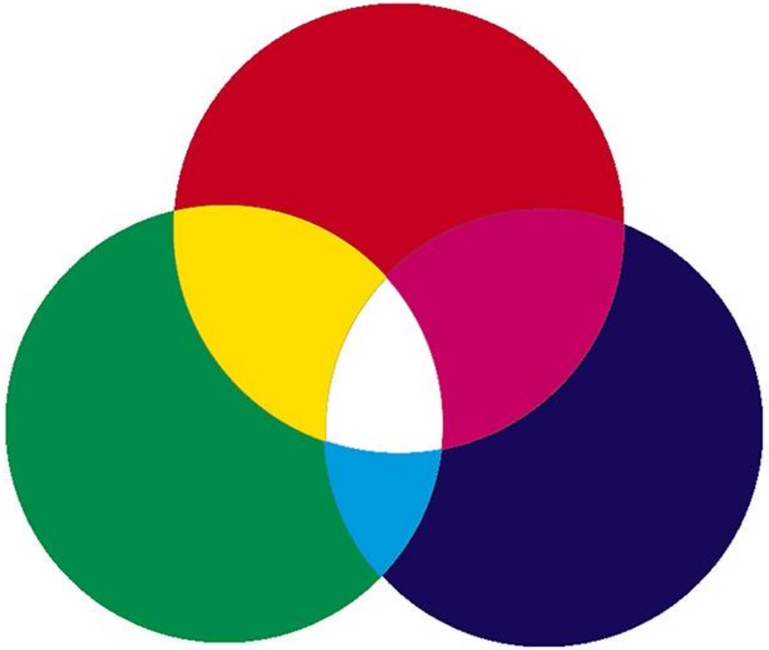
Colour Management: CMYK





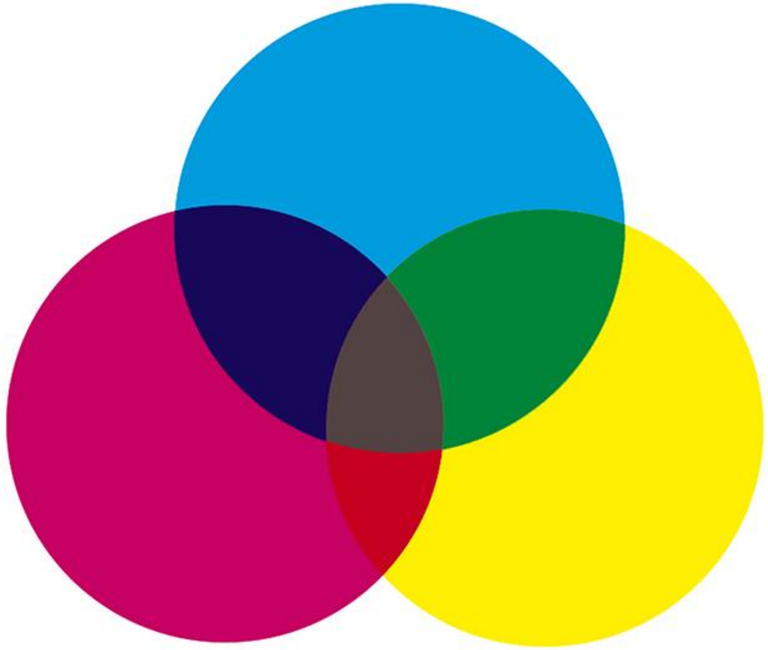
Colour Management: CMYK

RGB



Red, Green, Blue
(Additive Colours)

CMYK

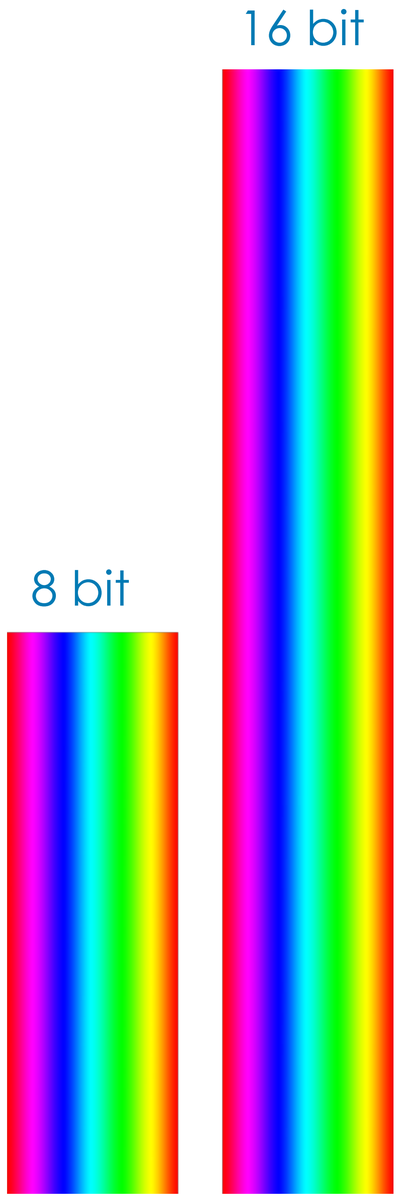


Cyan, Magenta, Yellow
(Subtractive Colours)

Bit Depth

8 bit
256 shades per channel
16.8 million colours

16 bit
65,536 shades per channel
281 trillion colours



The Relationship between Bit Depth and Colour Space

More ‘bits’ for finer granularity
Wider gamut to extend colour range

Sharping & Output

Screen Calibration

Screen Calibration by Eye

Windows 7 onwards

Control Panel > Appearance and Personalisation > Display > Calibrate Colour

Mac

System Preferences > Displays > Colours > Calibrate
