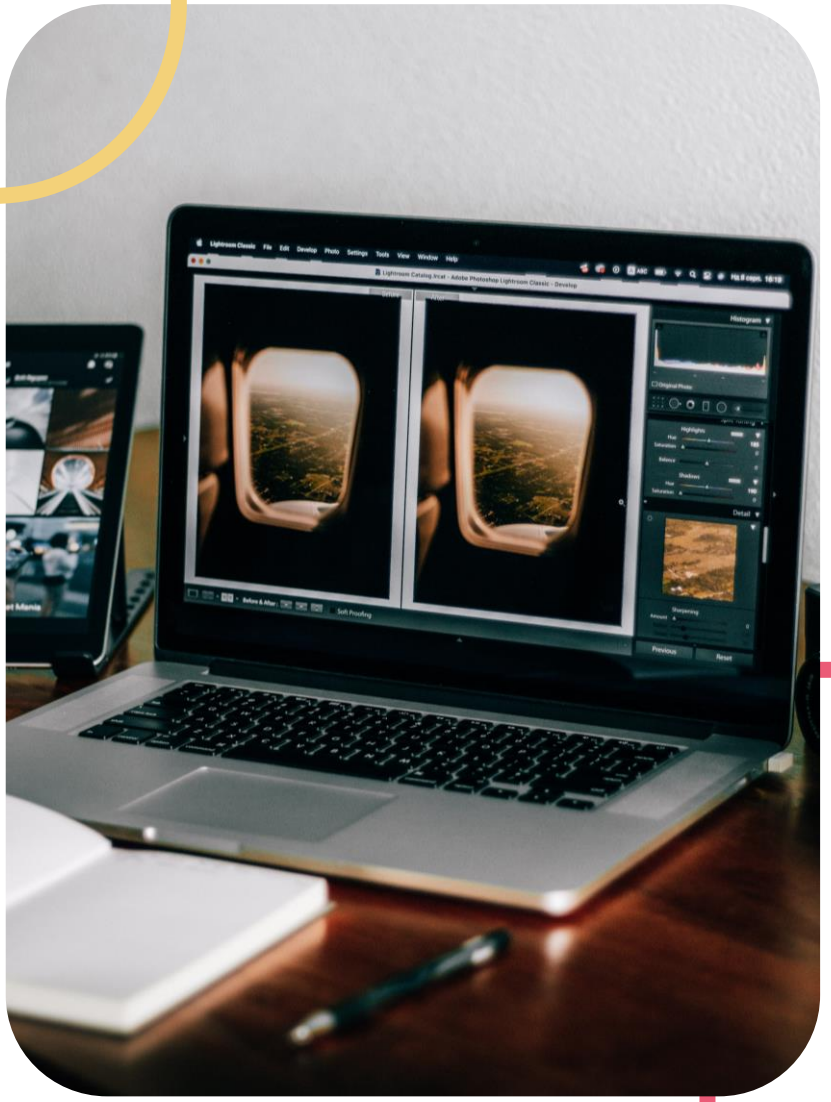
Diploma in

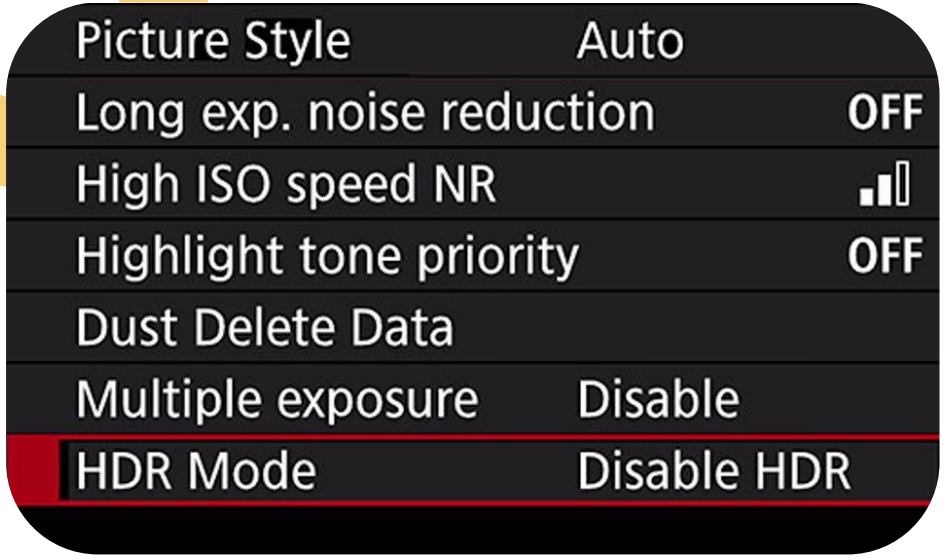
Lightroom

Reveal the detail



Objectives

- Shooting for HDR
- Merging HDR photos
- Editing HDR
- Creating a panoramic photograph



In camera HDR

Many cameras and phones have a HDR mode. This mode will take multiple exposures and combine them in camera. This will produce a Jpg file.

In camera HDR

You can choose how many exposures you want to combine and how many stops or 1/3rds of stops that you wish to use.

If available Auto align and Ghosting reduction are recommended.

AEB

If you would rather manually combine exposures Auto Exposure Bracketing will allow you to take multiple exposures without having to change the exposure each time. Bracketing may appear as a button, in the cameras menu or sometimes is also the camera’s exposure compensation button.
