

Advanced Masking & Compositing Project

Advanced Masking & Compositing – Process Explanation

1. Selected a starry sky as the background and enhanced its color and contrast.
2. Added a clock image at the top and blended it using screen mode for a surreal effect.
3. Imported a subject image and removed the background using Select and Mask.
4. Added wing images and aligned them with the subject, refining edges using layer masks.
5. Created a reflection by duplicating and flipping the subject vertically, then reducing opacity and applying blur.
6. Added water and atmospheric effects to enhance realism.
7. Applied lighting effects and glow using soft brushes and blending modes.
8. Used color grading techniques to unify the composition.
9. Finalized the image by adjusting shadows and exporting the result.
