

Creative Poster Design using Typography & Effects

Creative Poster Design – Explanation (Simple Version)

In this poster, I created a dark and dramatic theme based on action and war. I used a background with fire and smoke to make the scene look intense and powerful.

I placed the main character (samurai) in the center so that it becomes the main focus of the poster. This helps grab attention immediately.

For the text “GHOST OF TSUSHIMA”, I used a bold and rough-style font to match the theme. I added blood effects to the text to show violence and battle, and fire effects to make it look more dramatic and eye-catching.

I kept the layout simple by putting the title at the top and the character below it. This makes the design easy to understand and visually balanced.

I used mainly dark colors like black and red. Red shows danger and action, while black adds depth and mood to the design.

Overall, I used typography and effects together to create a strong and cinematic poster that clearly shows the theme.
