Linked Layers

What is a linked layer?

In Photoshop CC, you can create Linked Smart Objects. The contents of Linked Smart Objects are updated when the source image file changes. Smart objects can be contained in a .PSB file. This file store easy to update content. When updated it automatically updates the linked Smart object in the original PSD document.

What is a linked layer used for?

Linked Smart Objects are particularly useful for teams or in cases where assets must be reused across designs.
