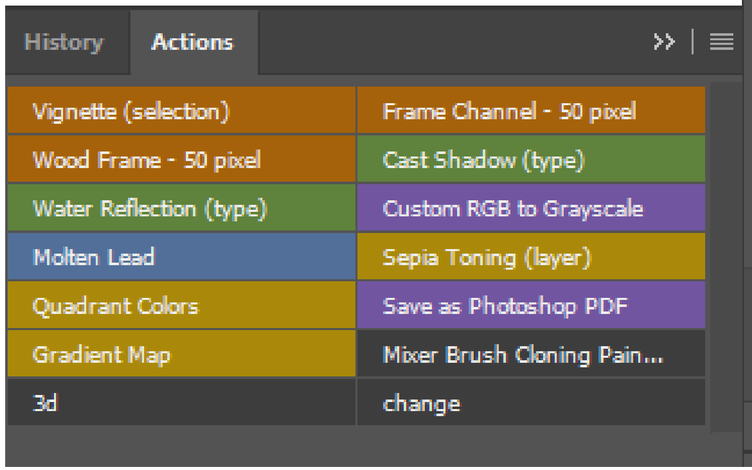
Button Mode



Batch Actions

What is an Batch Processing?

Batch Processing allows us to apply the same edits to multiple images at one time. This can be anything from resolution, file format and even Actions.

Play

Set refers to the folder choices in your actions panel.

Action refers to the action you wish to batch process.

Source

Folder will choose the images you wish to patch process

Options: alternative options to apply to batch processing.

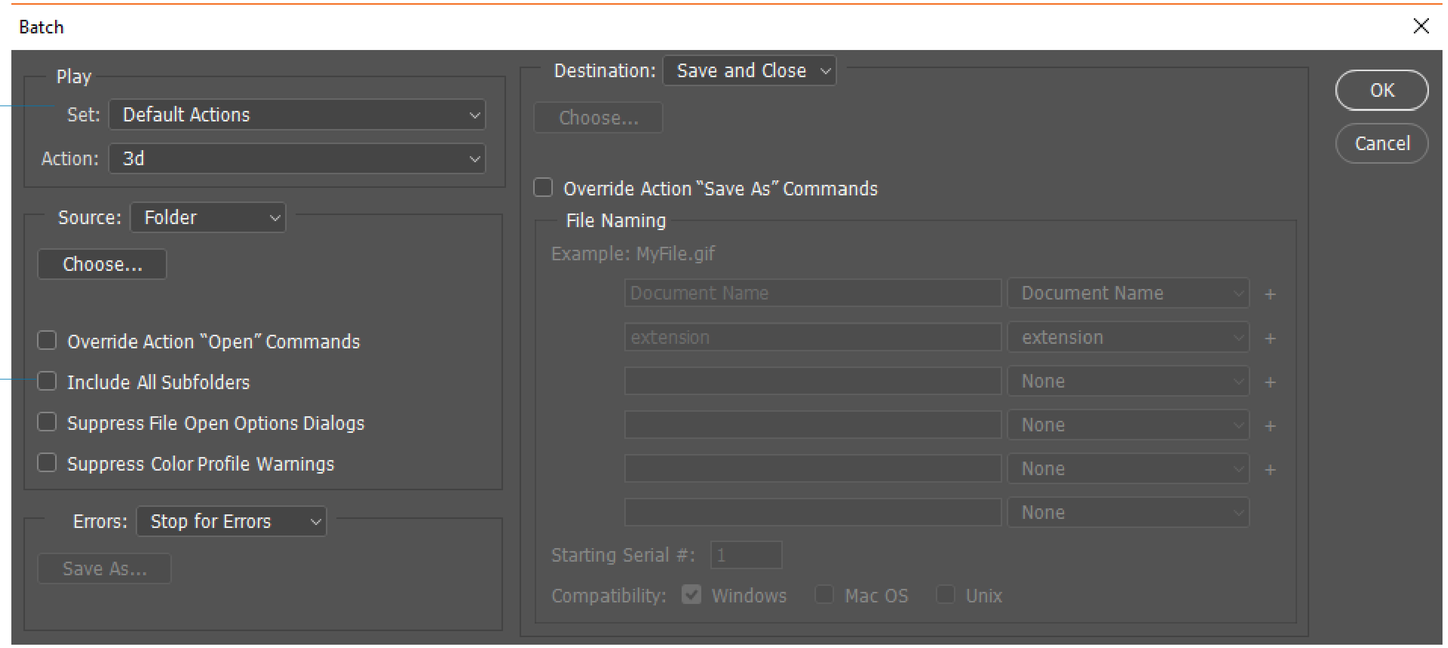


Image Processor

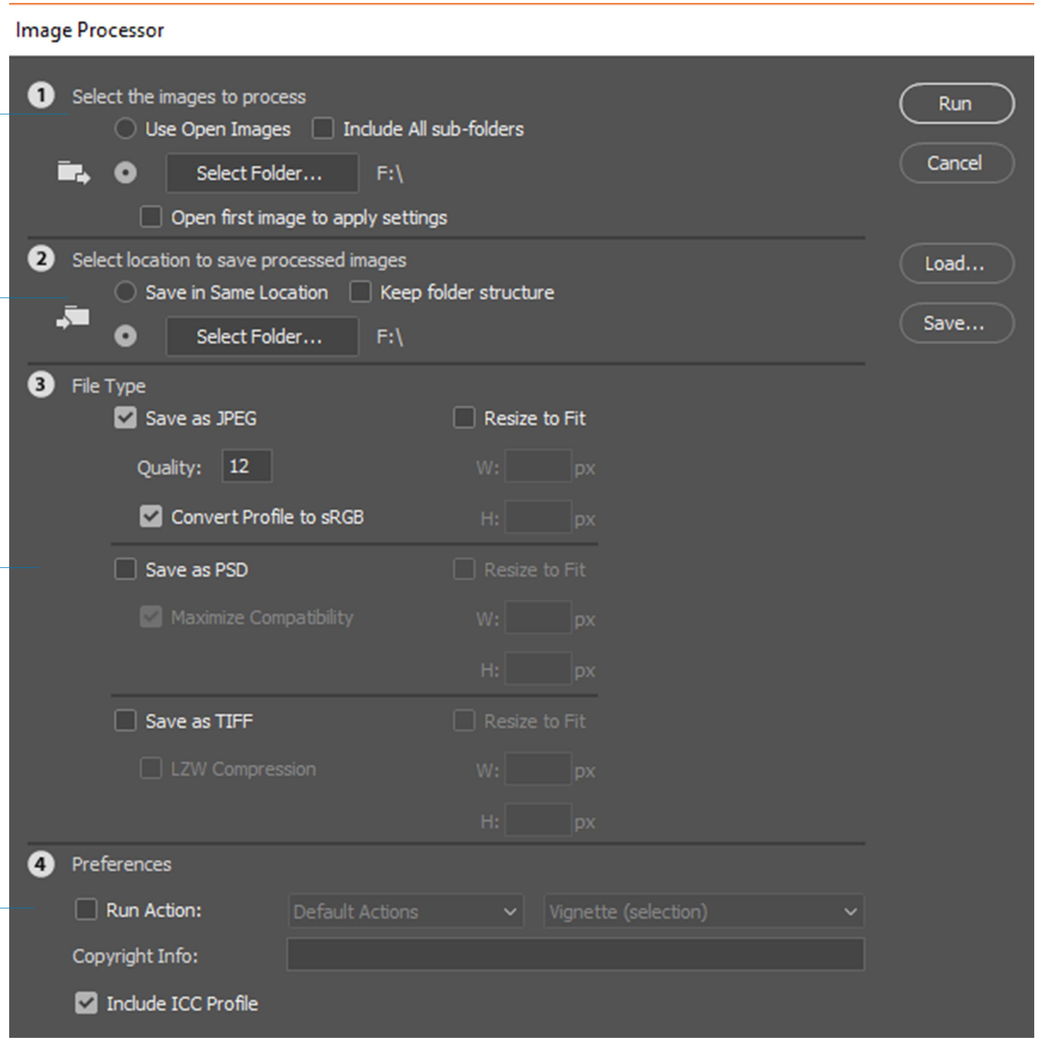
Stage 1
Select location to process images from

Stage 2
Select location to save images to

Stage 3
Select one or more save file types

Set quality and size of Batched images

Stage 4
Run Actions with image processor



Advertisement

You have been tasked created an image using Actions.

Open a image in Photoshop > use or create action to apply to your image.

Recommend action is the 3d tutorial.

Want to get ahead?

Shortcuts:

- Desaturate – Ctrl & Shift & U
- Invert – Ctrl & I
- Duplicate – Ctrl & J

Notes:

- Although Photoshop is an image editor, over the years it has adapted to become more graphical. Vectors are created using the Pen Tool, the Text Tool or the Shape Tool.
