Diploma in Photoshop

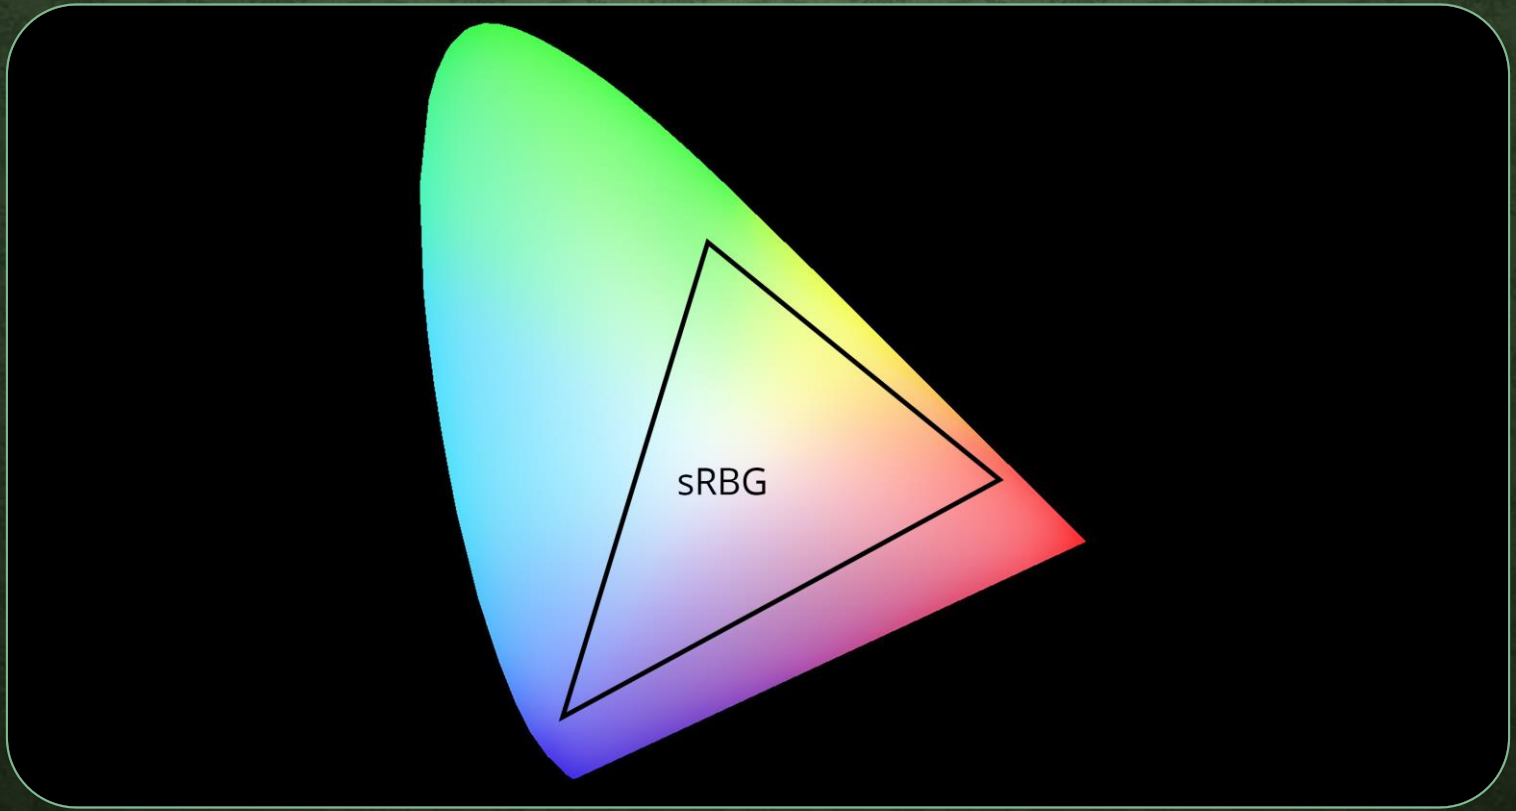
Lesson 29
Diploma in Photoshop
Sharpening and Output

What we will discuss this week:

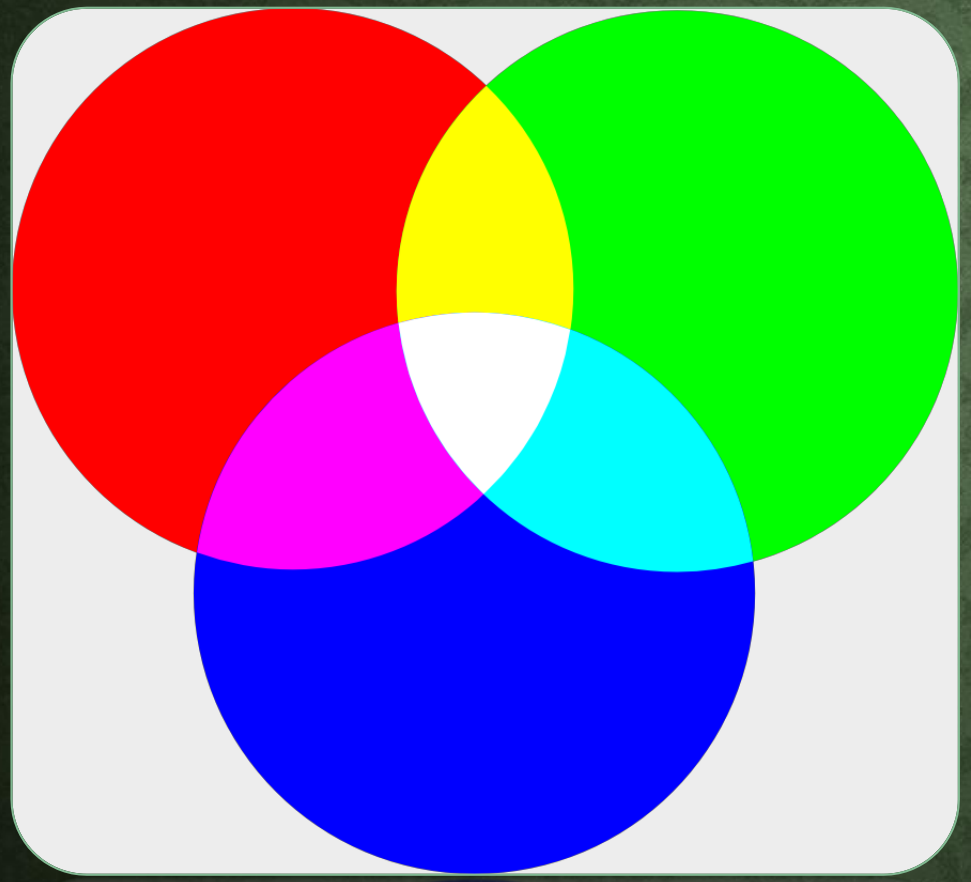
- ❑ Colour Management
- ❑ Discussing Colour Spaces
- ❑ RGB V CMYK
- ❑ Screen Calibration
- ❑ Colour Correcting for Print
- ❑ Sharpen images

Colour Management

What is a ‘colour space’?

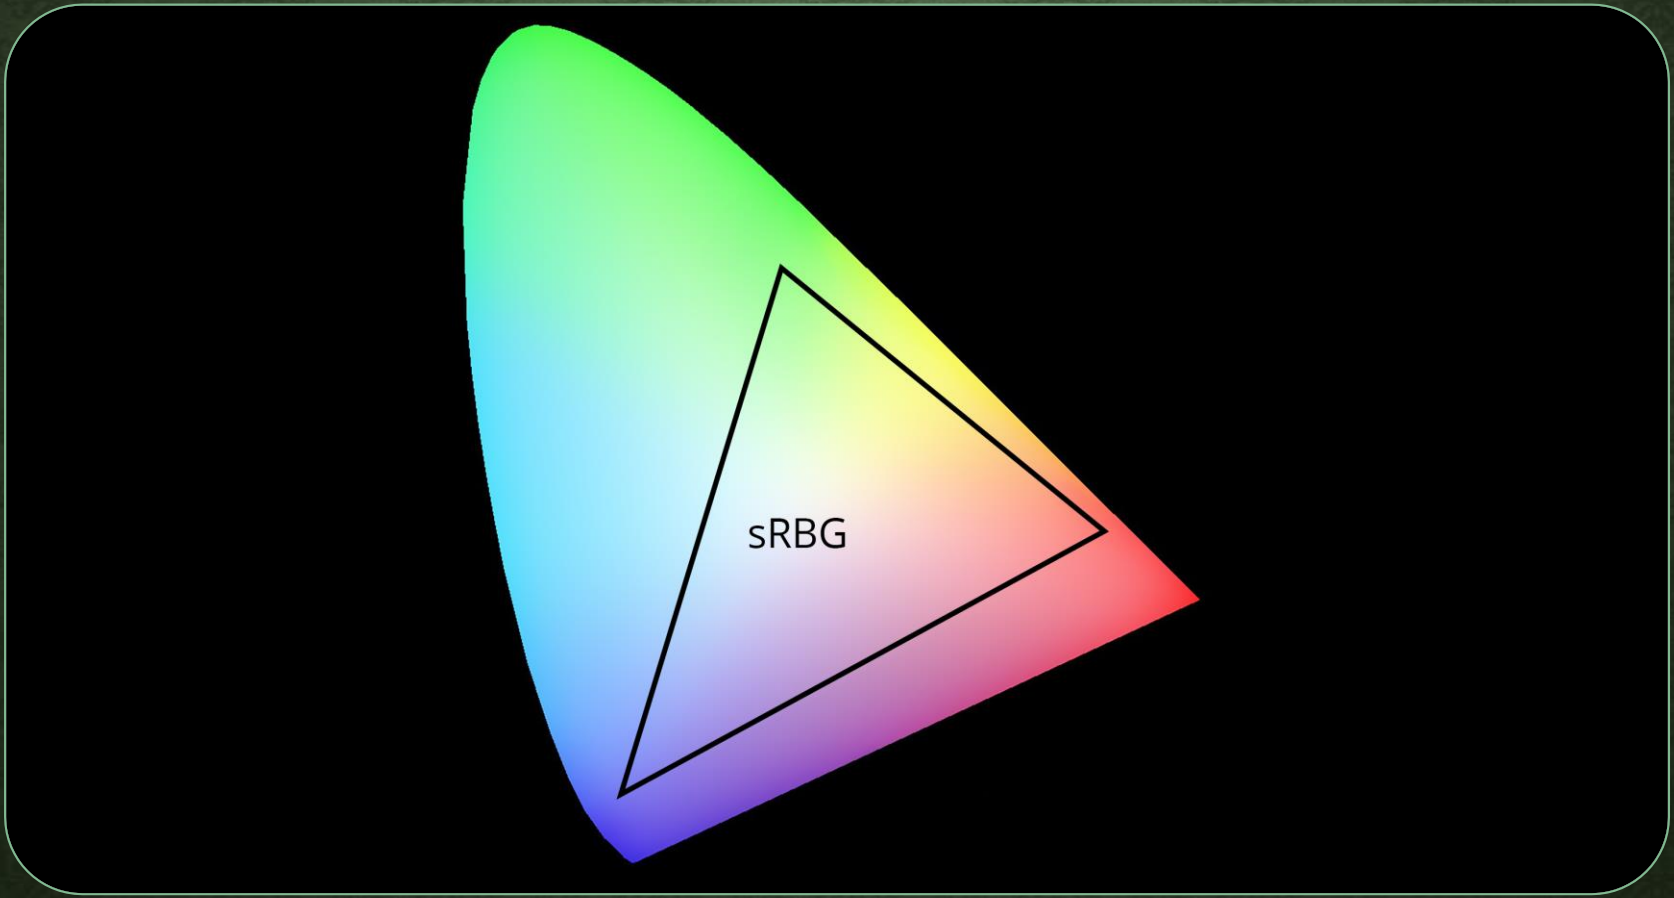


RGB

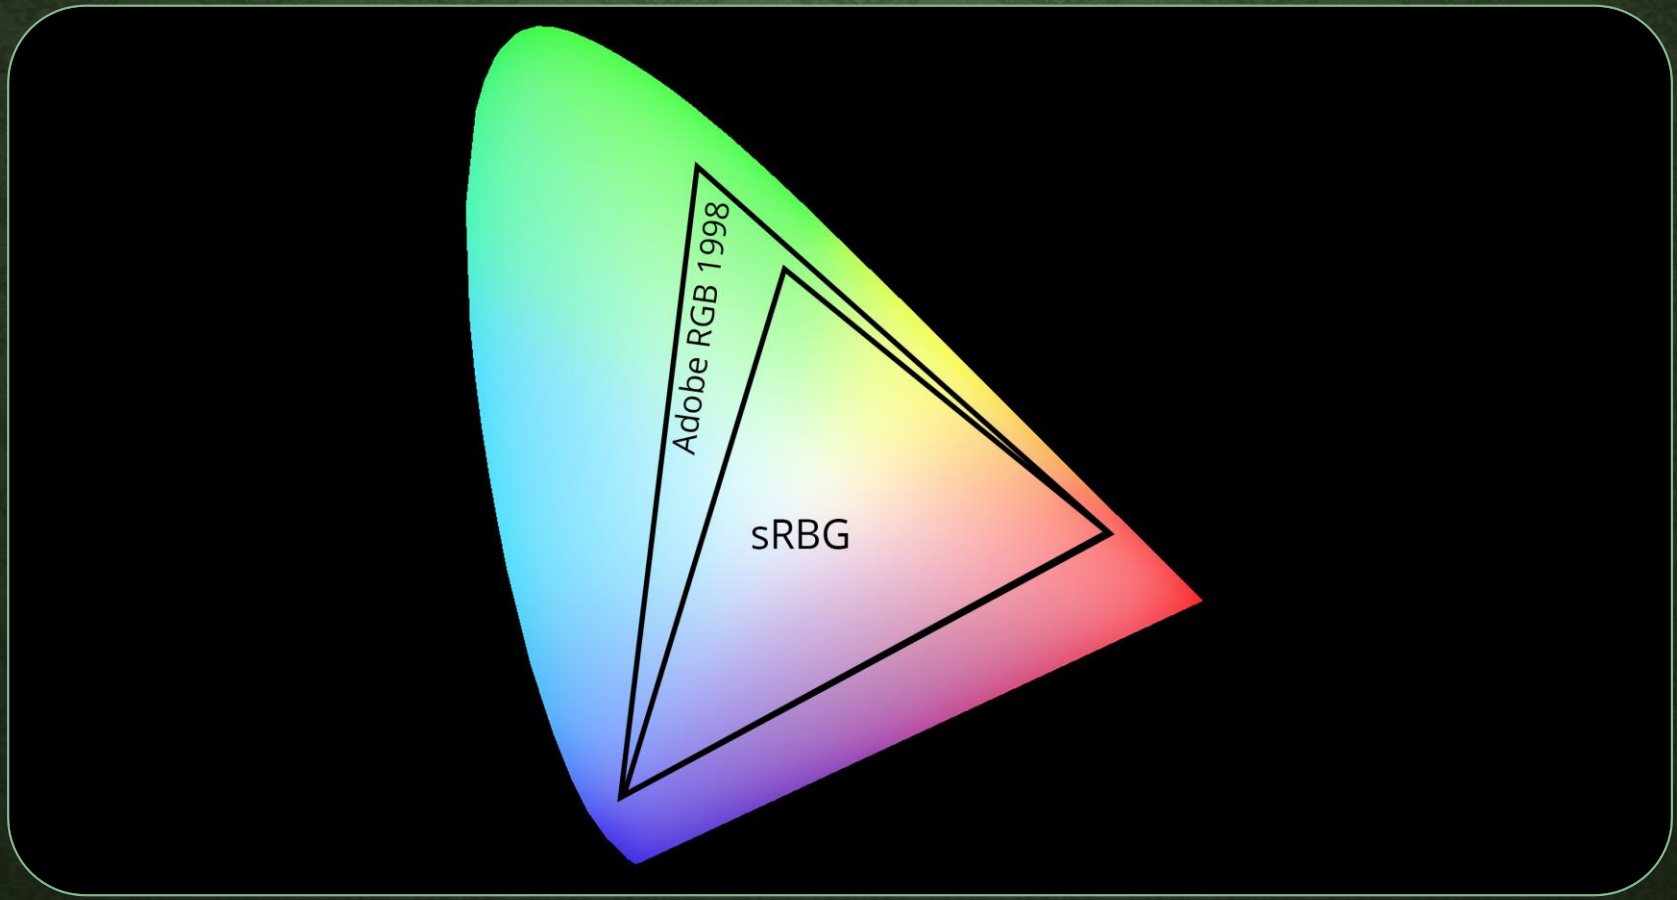


Red, Green, Blue
(Additive Colours)

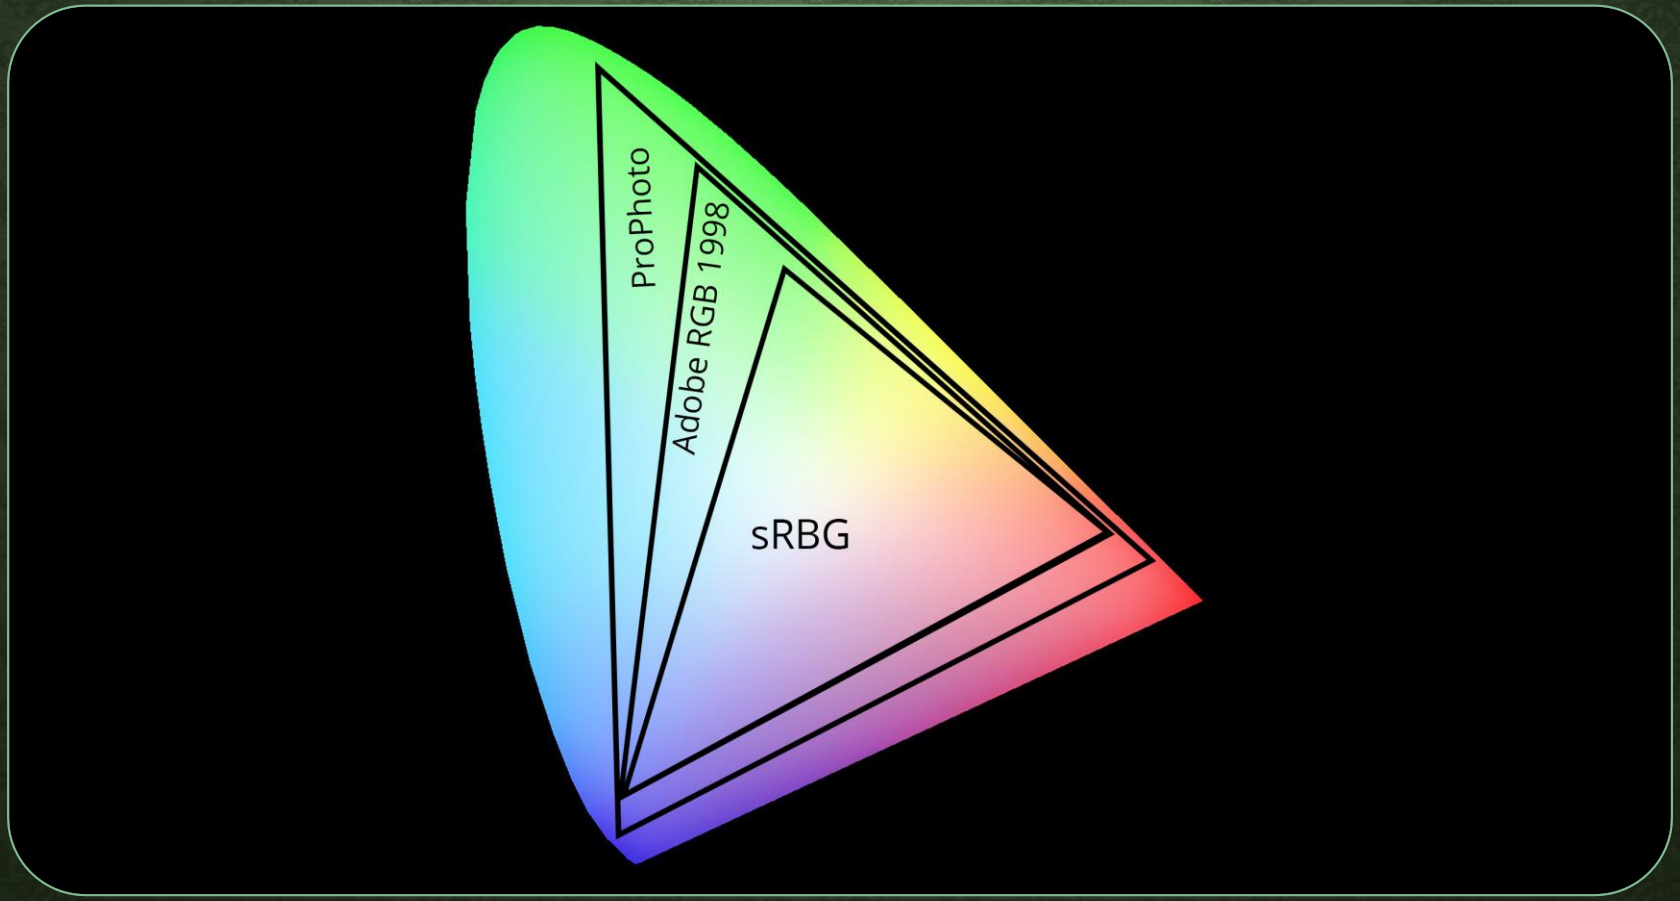
- sRGB
- Adobe RGB 1998
- ProPhoto



sRBG

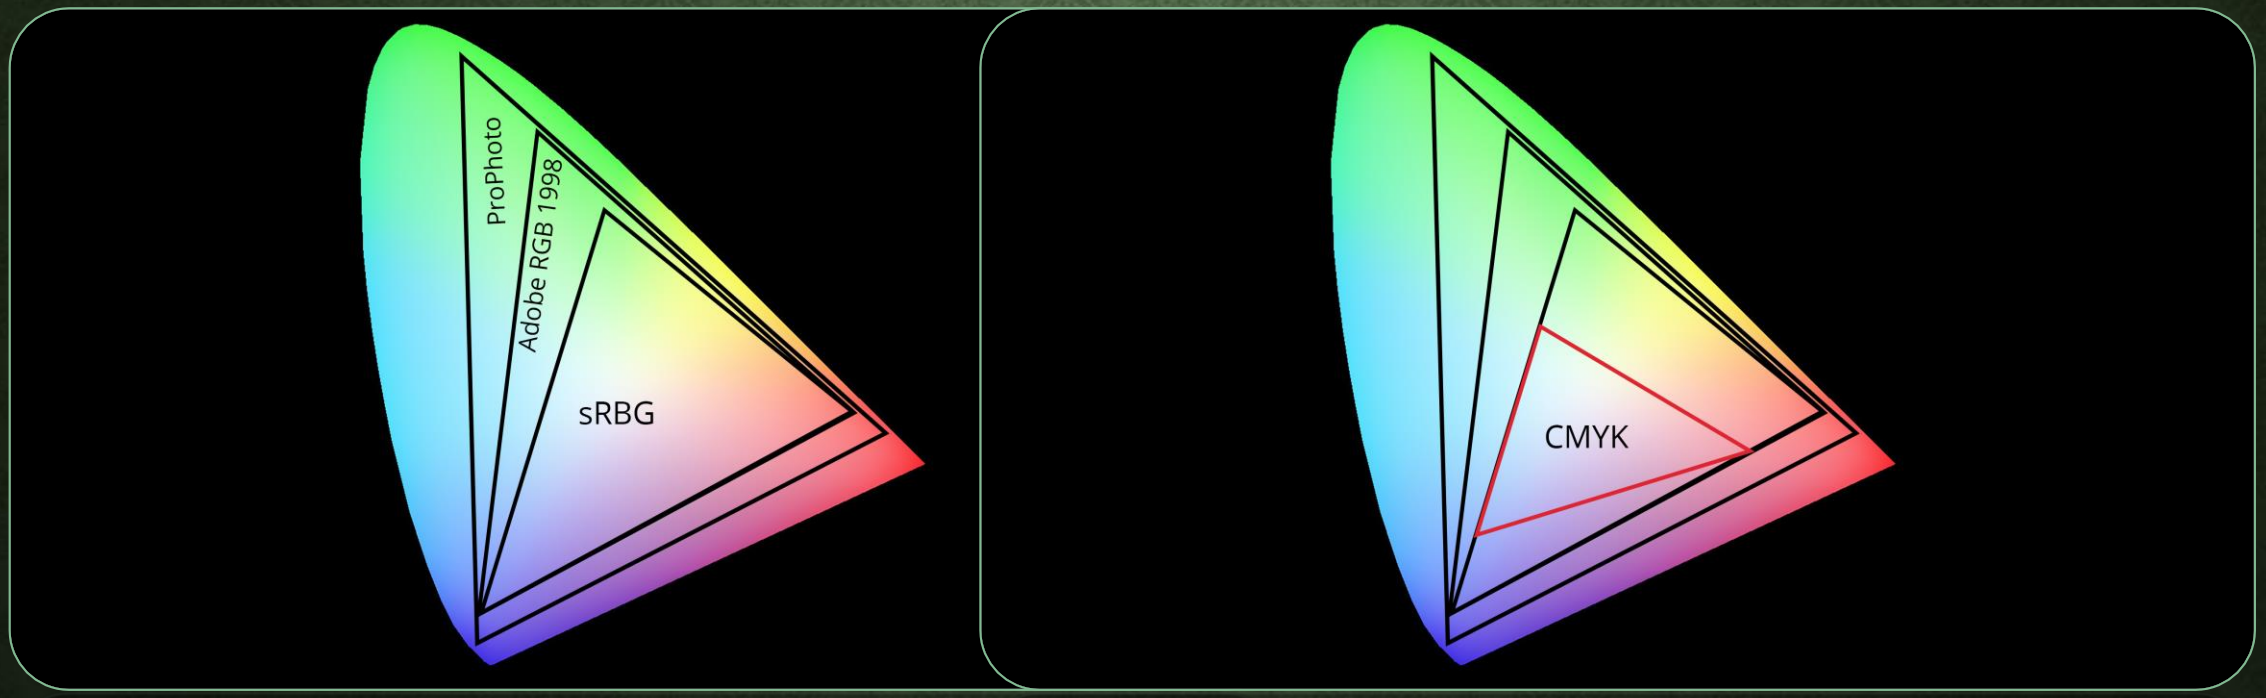


Adobe RGB 1998
sRBG



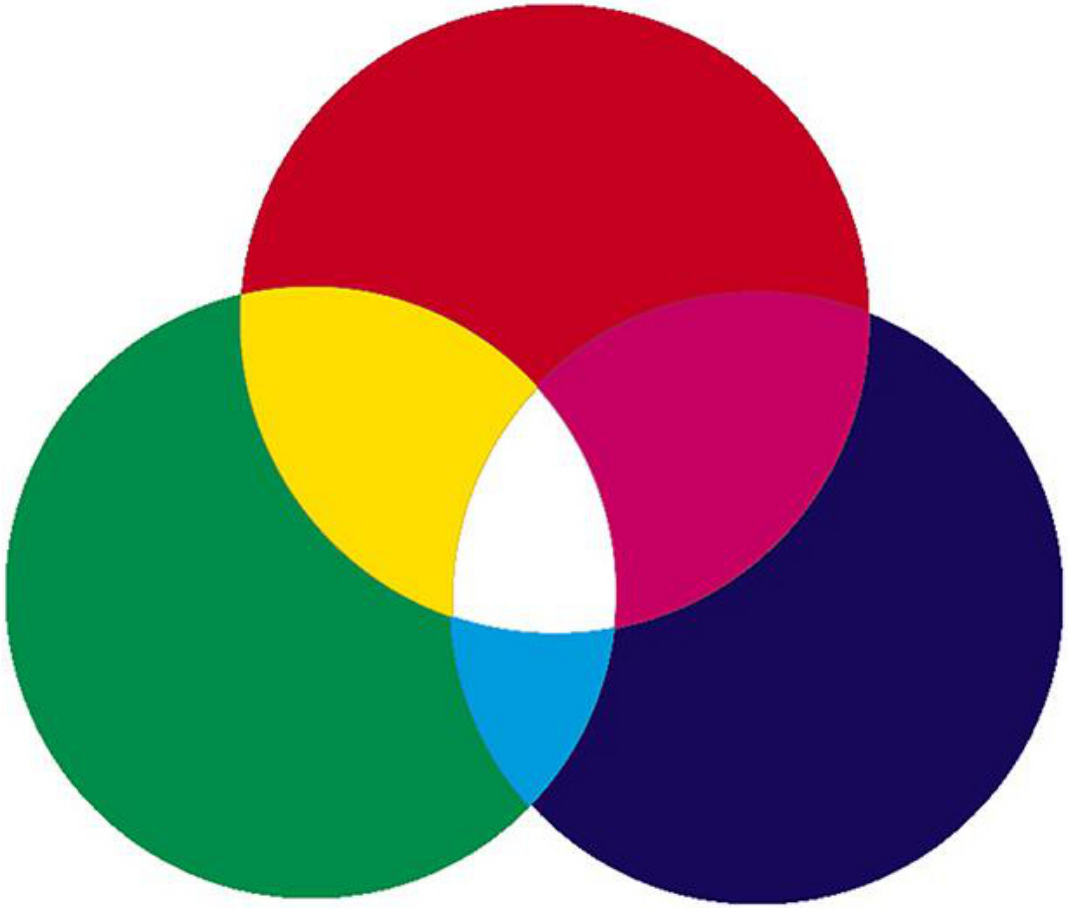
ProPhoto
Adobe RGB 1998
sRBG

RGB vs CMYK



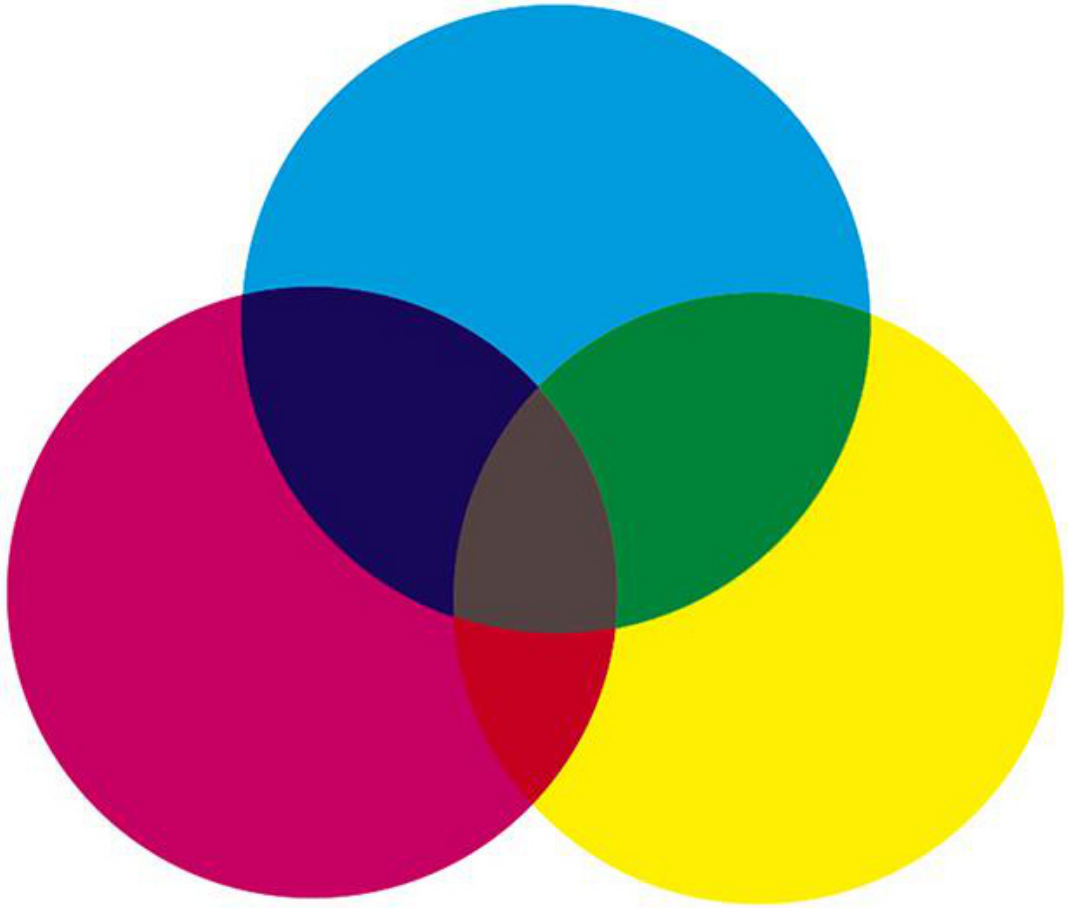
ProPhoto
Adobe RGB 1998
sRBG
CMYK

RGB



Red, Green, Blue
(Additive Colours)

CMYK



Cyan, Magenta, Yellow
(Subtractive Colours)

Bit Depth

8 bit vs 16 bit

8 bit
256 shades per channel
16.8 million colours

16 bit
65,536 shades per channel
281 trillion colours

Bit Depth

The Relationship between Bit Depth and Colour Space

- More ‘bits’ for finer granularity
- Wider gamut to extend colour range

Setting up your Photoshop workspace correctly & how to convert to a different colour space

Colour Calibration

Profile My Display
Place ColorMunki Device
Verify Display Type
Place ColorMunki on Display
Create Profile
Before and After Comparison

Measuring Display Characteristics
Attach the sensor to the display at the location indicated by the image to the right.
Clean the monitor and the suction cups on the sensor if necessary to ensure that the device remains firmly attached throughout the measurement procedure.
ColorVision

Spyder4

Calibration by eye

Windows 7 onwards
Control Panel > Appearance and Personalisation > Display > Calibrate Colour

Mac
System Preferences > Displays > Colours > Calibrate

Completed lessons
