Lesson Objectives

The advent of mobile apps

The origin of mobile phones

The first mobile phone was created by Motorola in 1973!

This phone weighed a whopping 1.1kg (2,43lb)

The first mobile phone only sold in 1983 for \$ 4 000

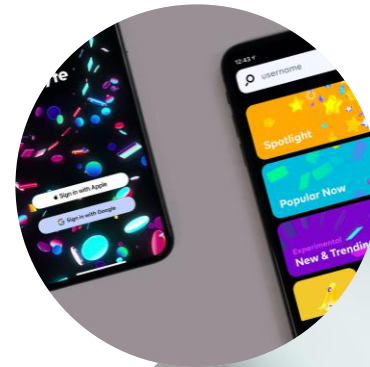

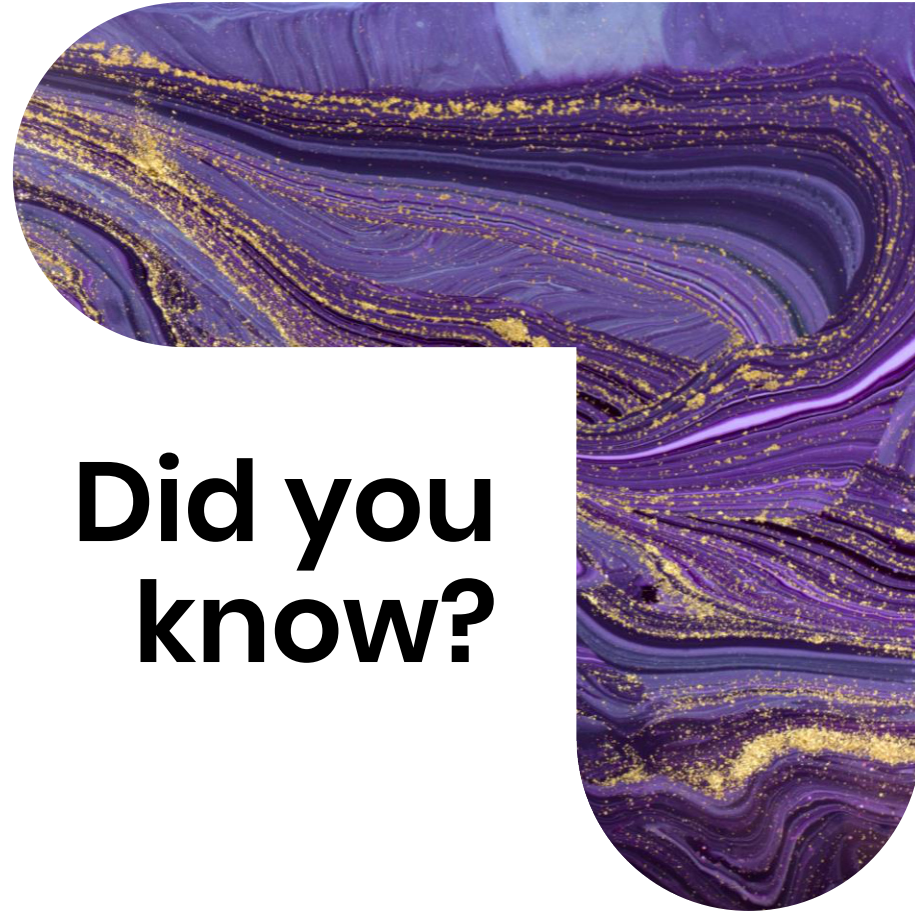

The origin of smartphones

- The first smartphone was known as the Simon Personal Computer
- It was available commercially in 1994
- It had a touch screen, could send/receive emails & fax messages, had a note and calendar function as well as apps
- It had a monochrome LCD screen and only one hour battery life

What is a mobile app?

- Software for small, wireless devices
- It considers the demands and constraints of these devices
- Mobile apps offer features that computers don't offer
- Makes our lives easier

**Did you
know?**

Your mobile phone has
more computer power
than the computer used
for the Apollo 11 moon
landing in 1972!

When was the first smartphone available to the public?

1994

1987

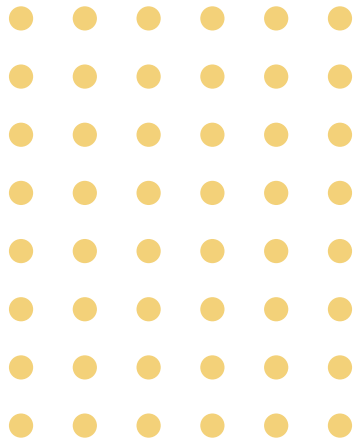

1999

Mobile vs Desktop

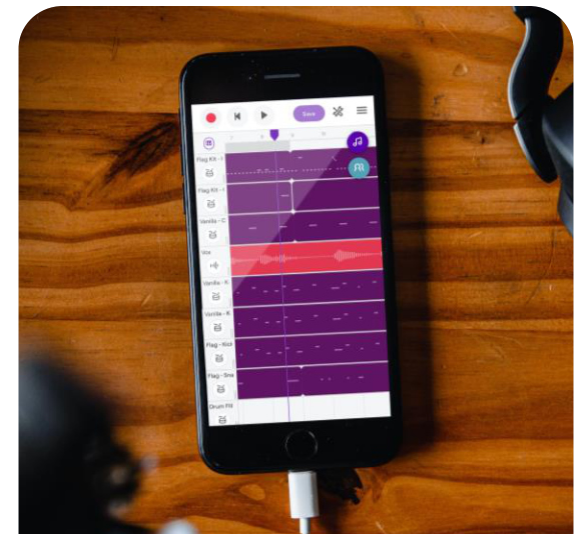

Mobile devices & apps

- Easy to use
- Accessible anywhere
- Free to use

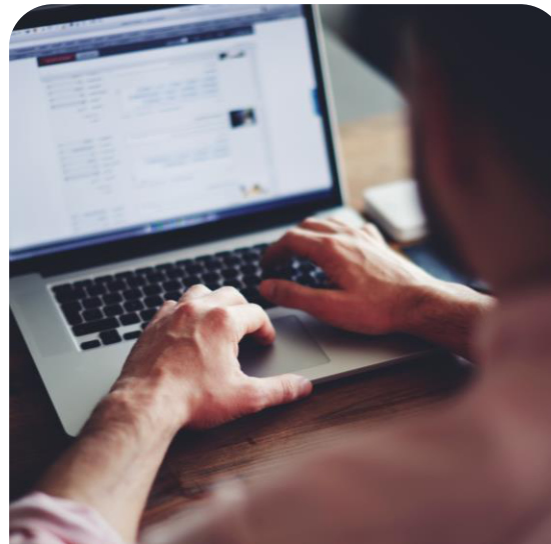

- One-purpose
- Small scale
- Limited functionality
- Weak processor
- Low storage
- Difficult to replicate advanced user interaction

Computer & software

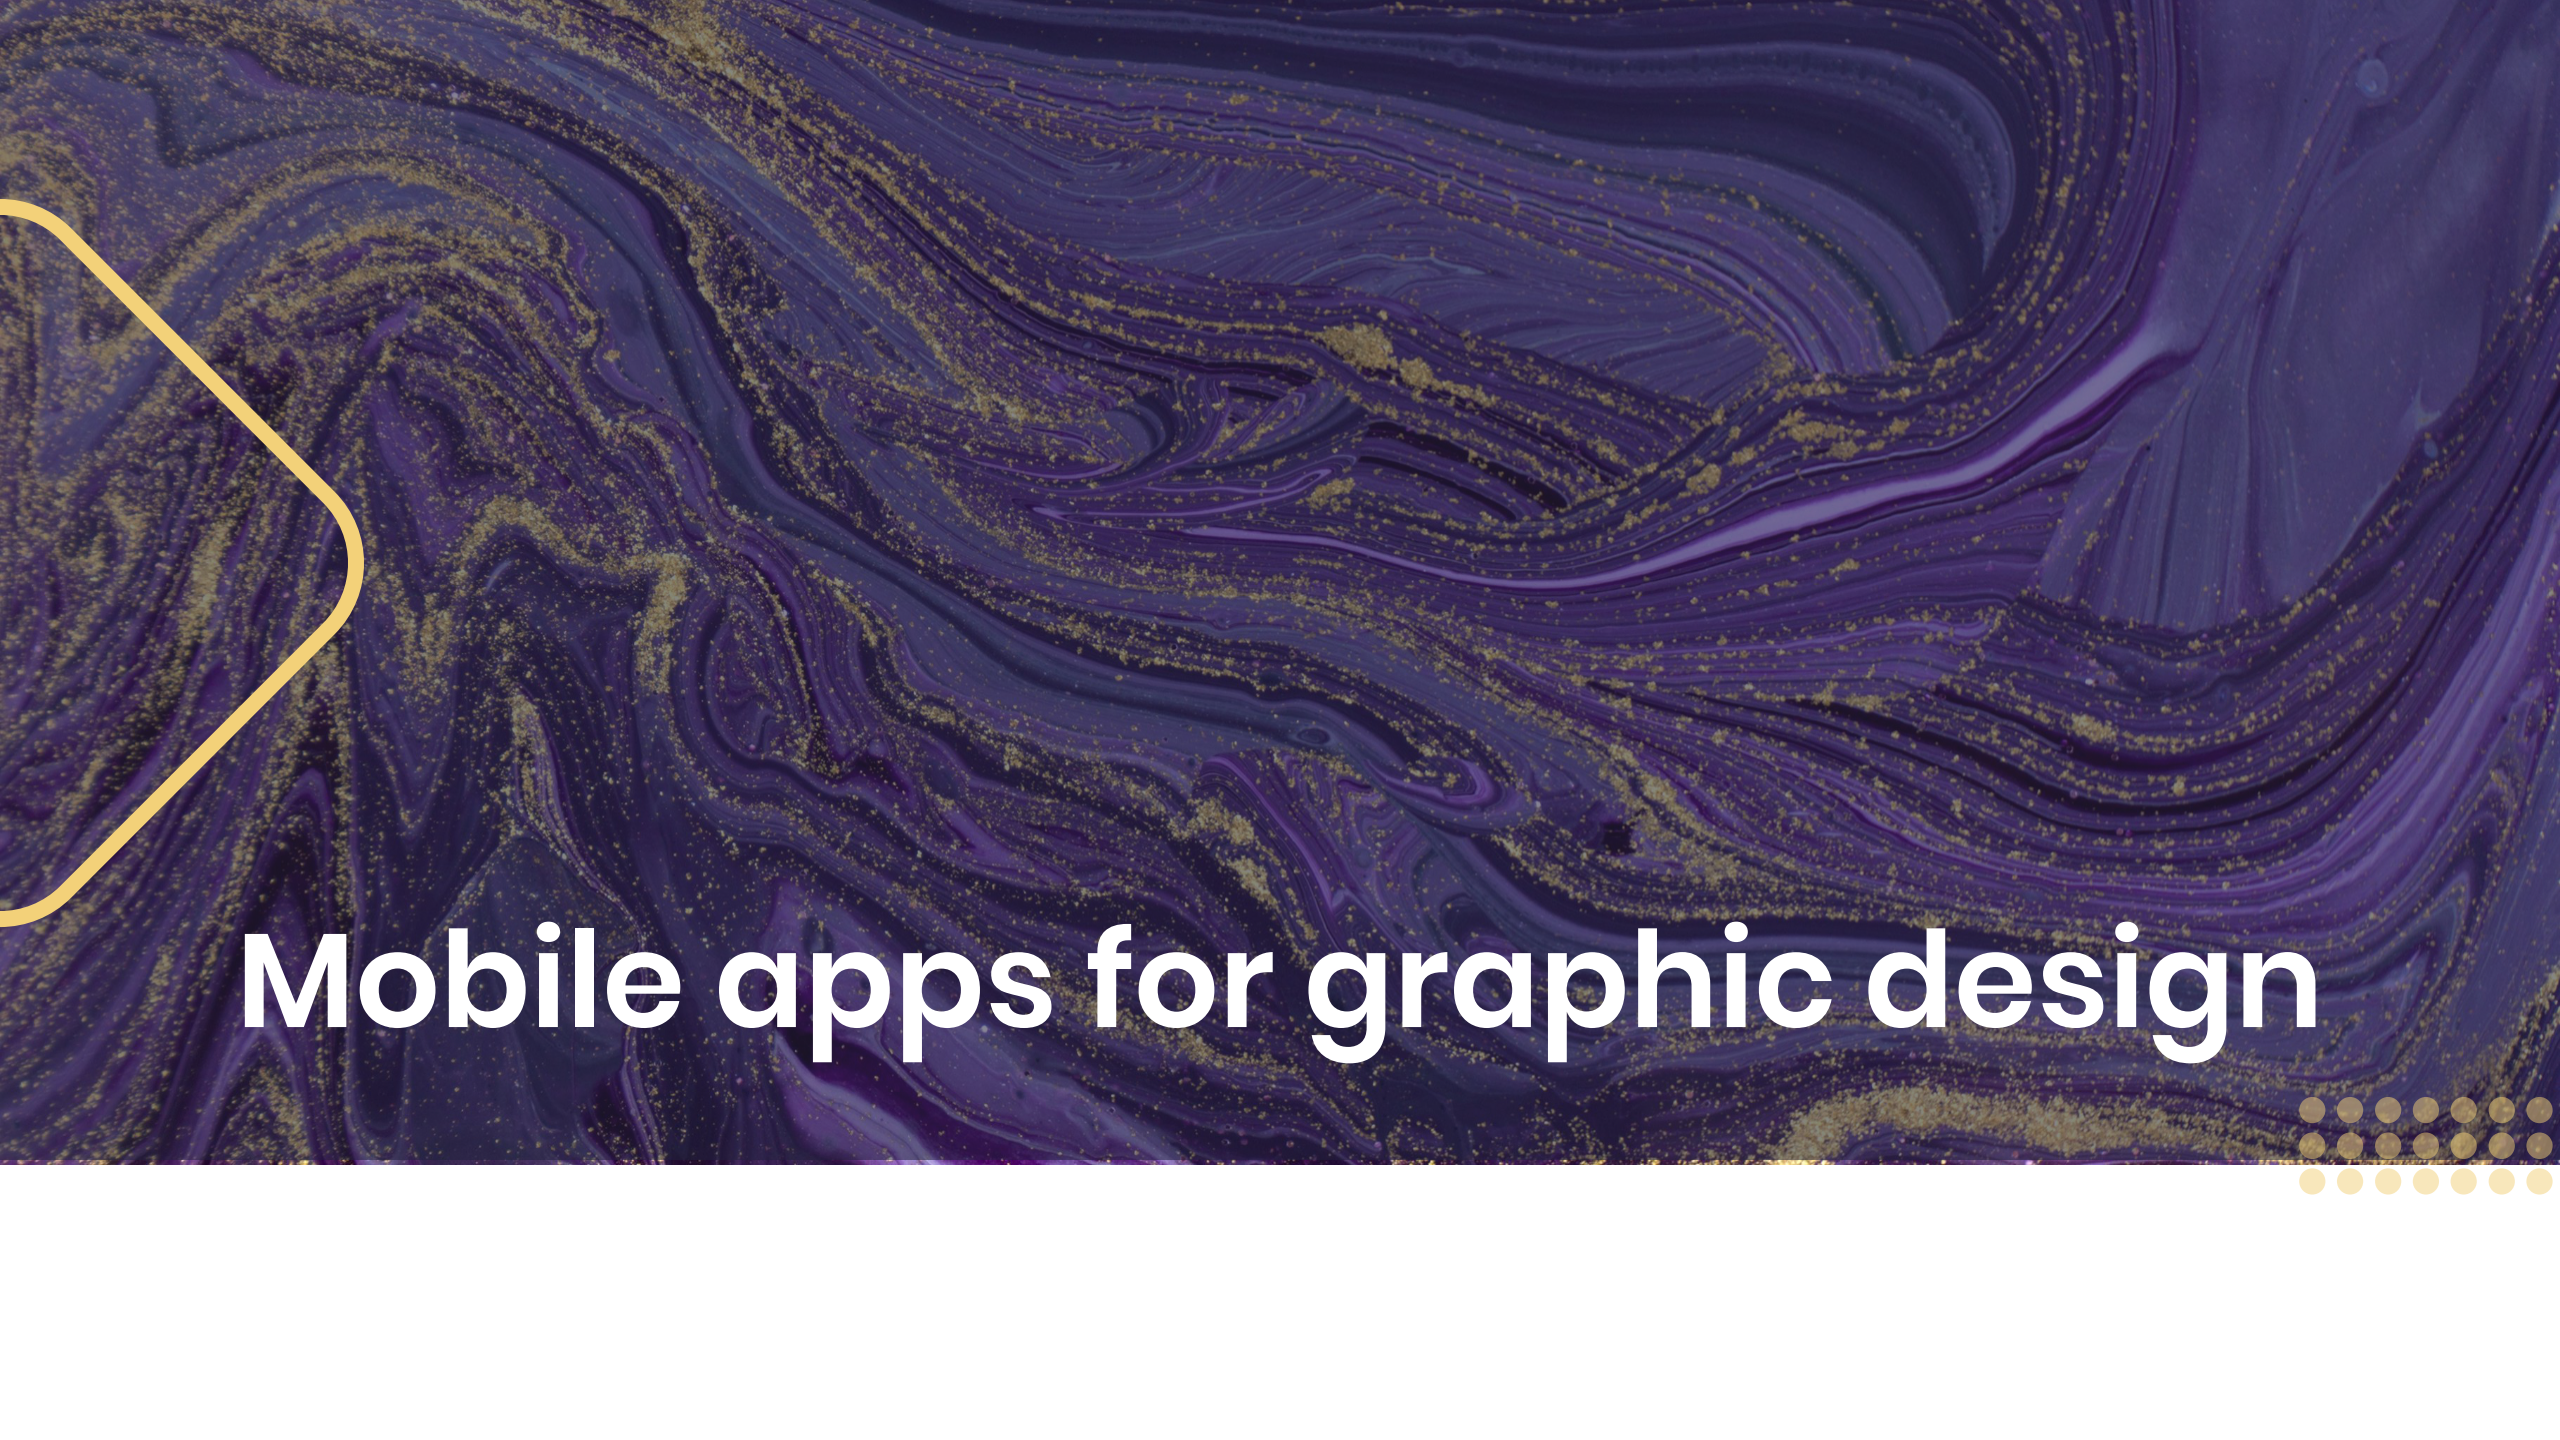

- Web access not always necessary
- Great functionality
- Fast processor
- Good storage capacity
- Easily upgrade hardware
- Durable

- Not always free
- Bulky & big
- Not accessible anywhere
