Complete Cosmetic Retouching

Liquify Tool

Liquify Tool

The liquify tool allows you to alter the shape of your images with a range of warping tools. Each have their own benefit and all can play a vital role in Cosmetic Retouching.

The Newest versions of Photoshop CC also come with a Face Aware Liquify Option. This new option allows you to manipulate portraits quickly with great power.

Negative Clarity

Negative Clarity Steps:

Open Image

Open Adobe Camera Raw Plug-in
>Filter > Camera Raw

Select the Adjustments Brush
and mask the area you wish to
apply negative clarity upon.

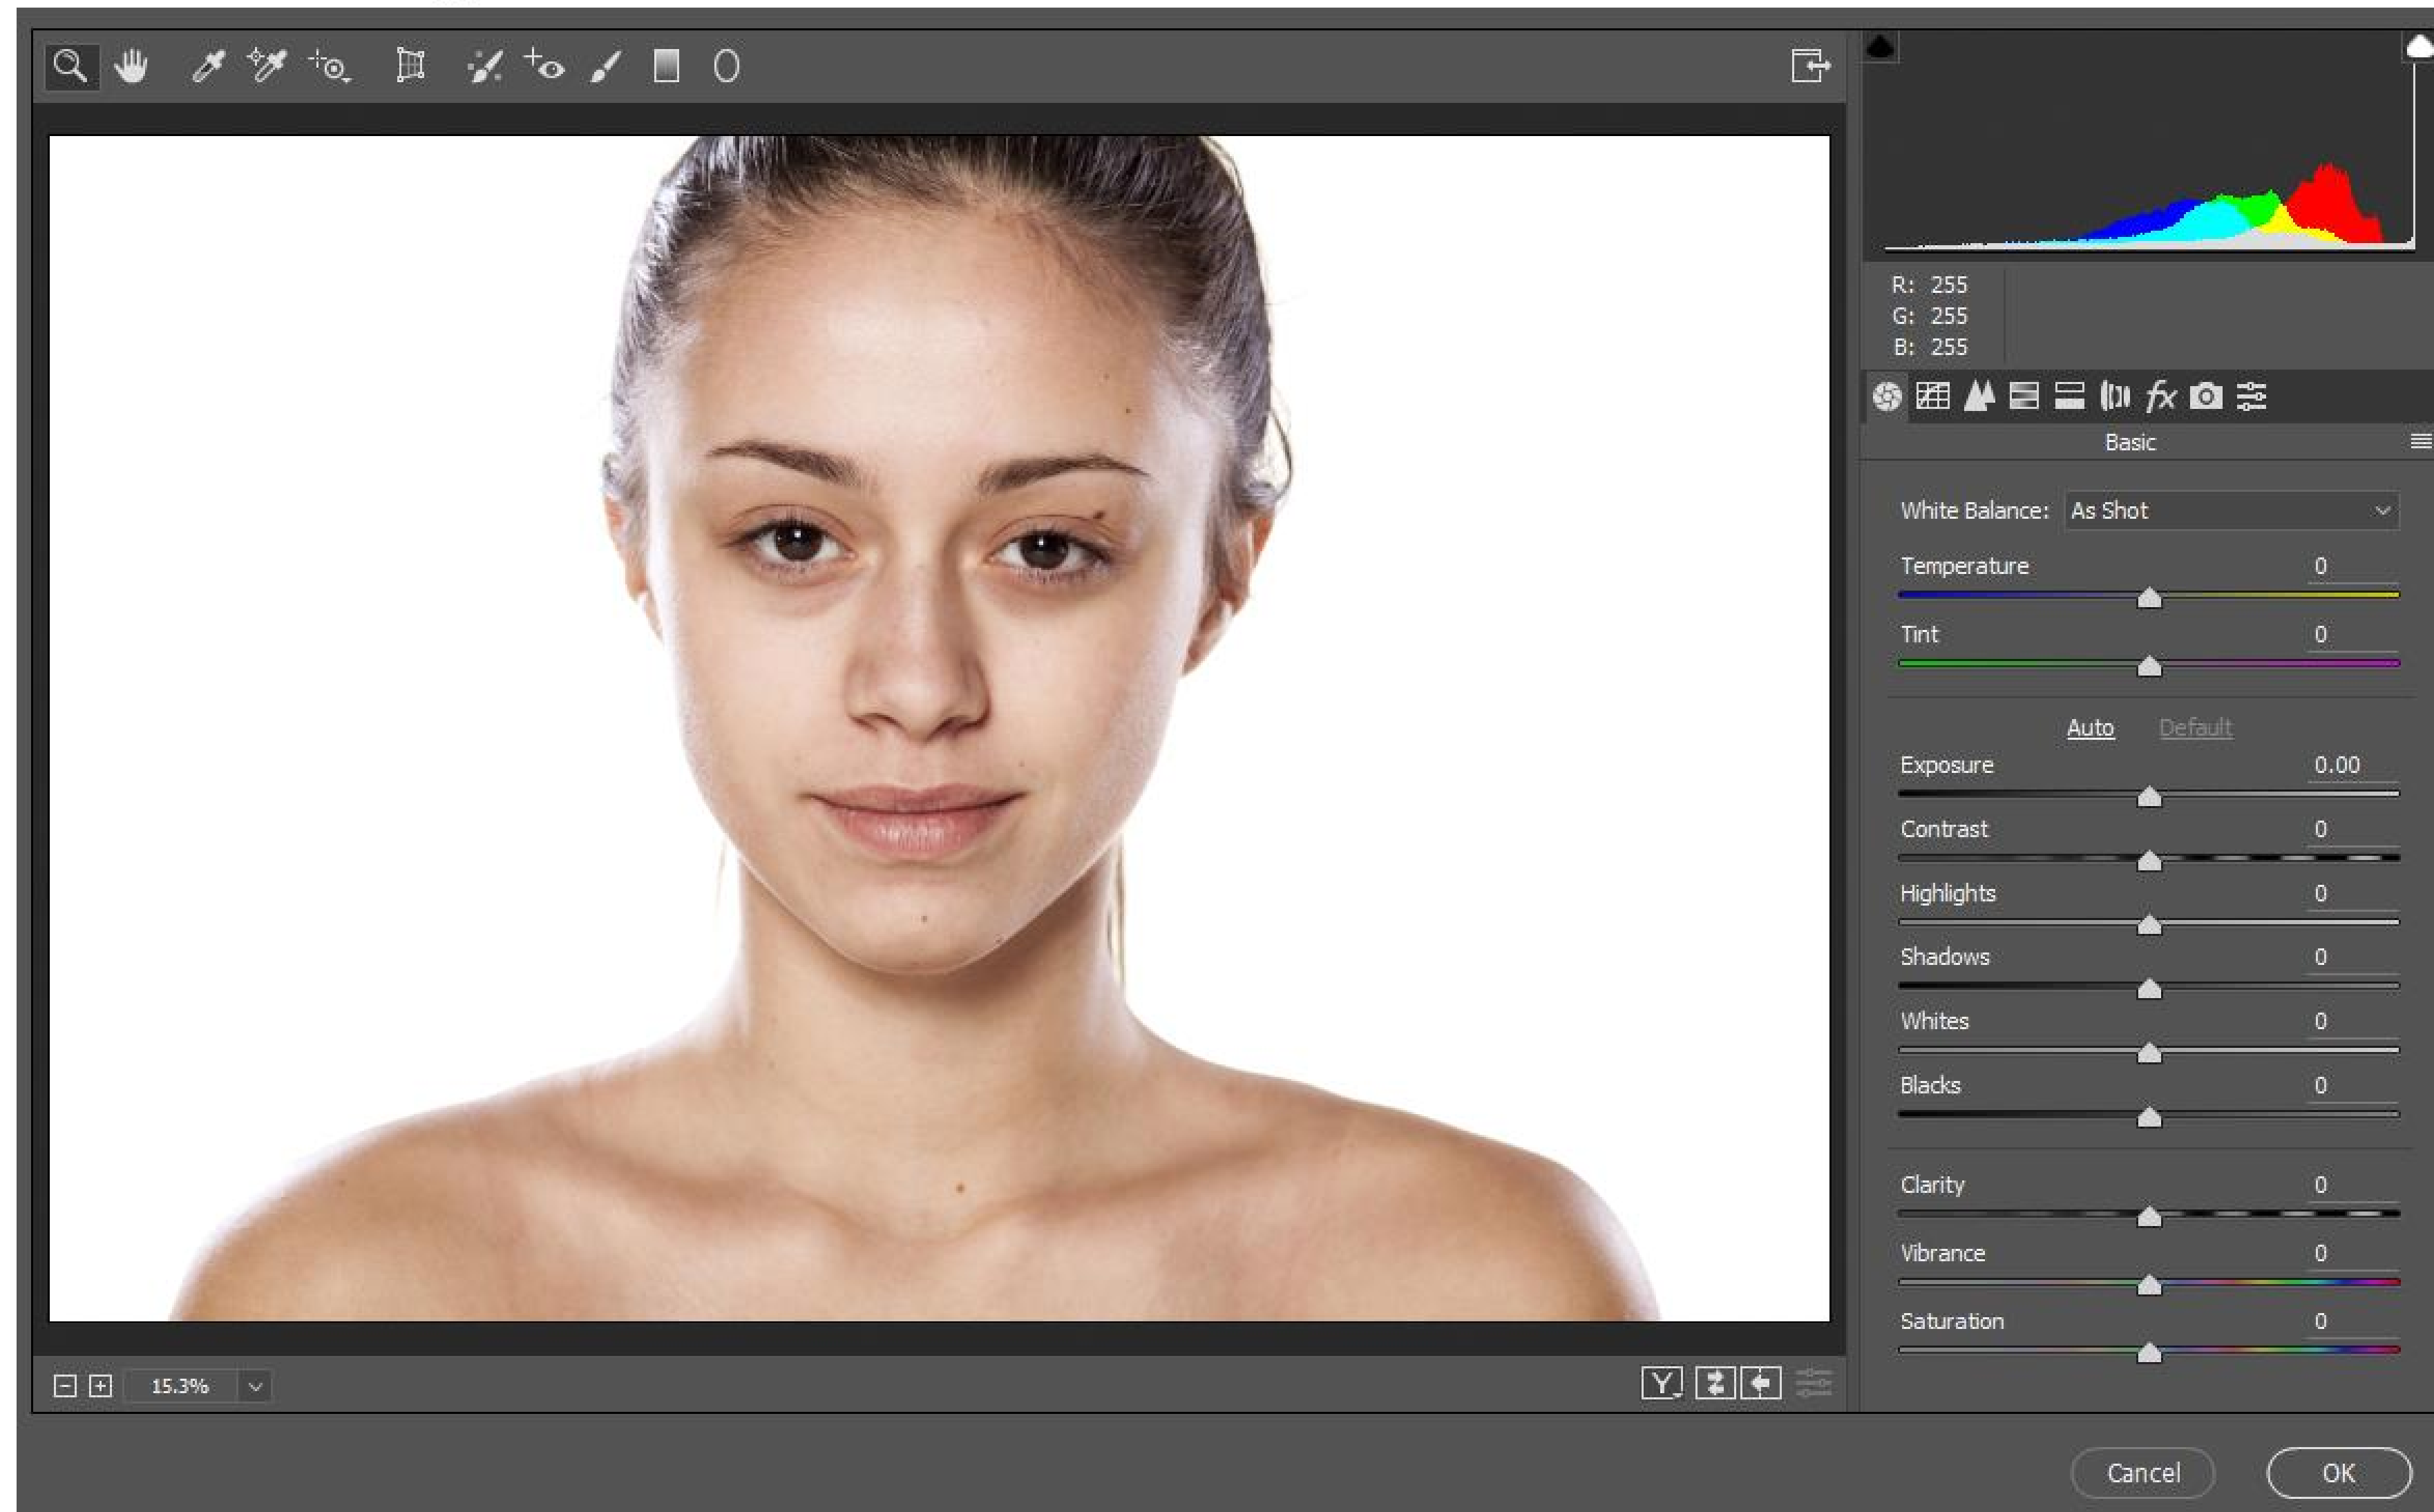

Check with exposure slider that
only masked area is effected

Lower Clarity Slider

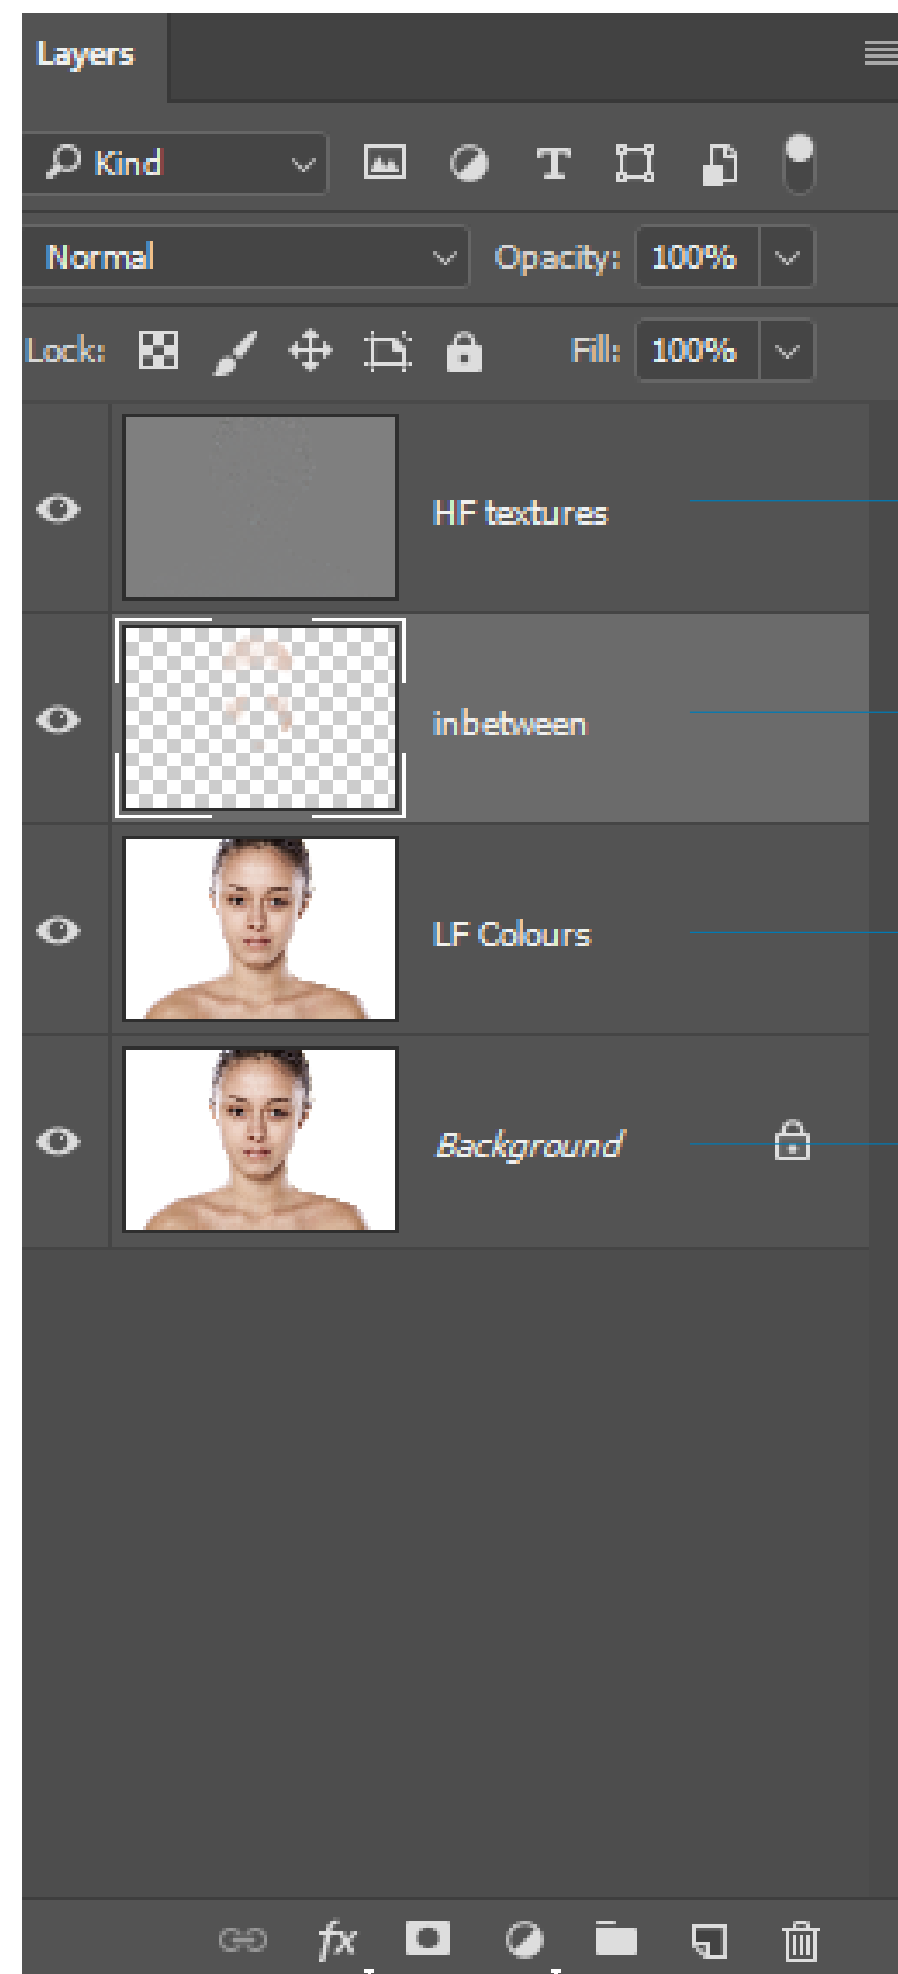

Raise Sharpness Slider

Compare for best results

Frequency Separation

● HF Texture

● Clone Stamp

● LF Colours

● Original Image

Frequency Separation Steps:

Open Image

Duplicate image x 2

Rename layers as LF – textures and HF - Colours

LF: Add a gaussian blur to this layer between 1-5%

HF: Use the image tab and apply image. Choose LF from drop down. Change Mode to Subtract ,Opacity 100%, Scale 2 and Offset 128. click ok

Change blend mode of HF to Overlay.

Add new layer in between HF/LF and use clone stamp tool on 13% current and Below

Retouching

You have been tasked to retouch an image cosmetically.

Open any images you want in Photoshop
> use a range of healing tools and techniques.

Remember to select current & below if editing non-destructively.
