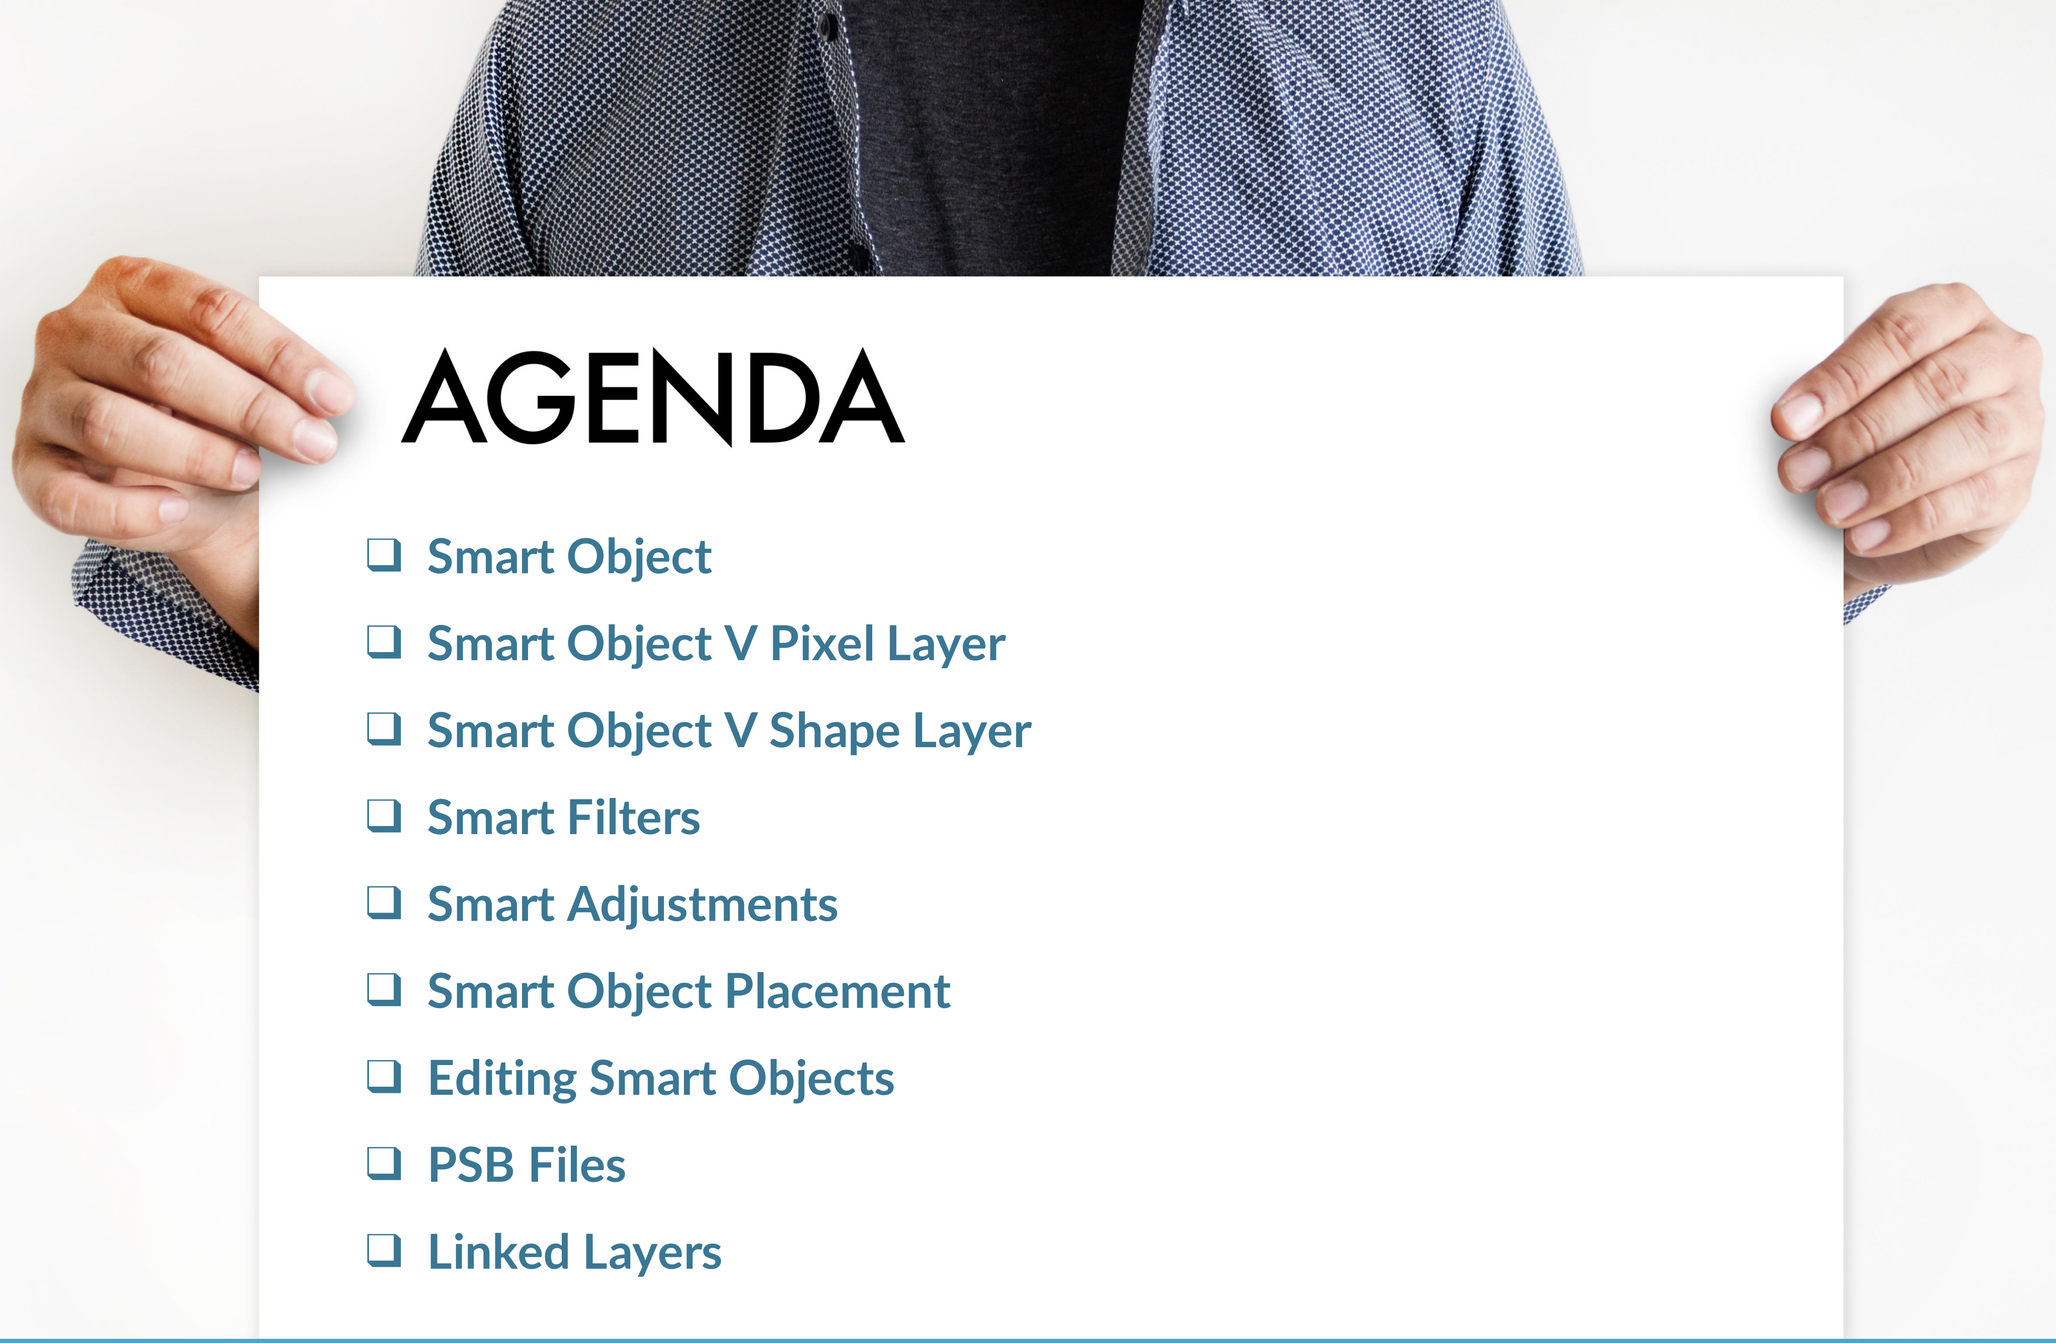
Lesson 23
Powerful Enhancement

The Power of Smart Objects



AGENDA

- ❑ Smart Object
- ❑ Smart Object V Pixel Layer
- ❑ Smart Object V Shape Layer
- ❑ Smart Filters
- ❑ Smart Adjustments
- ❑ Smart Object Placement
- ❑ Editing Smart Objects
- ❑ PSB Files
- ❑ Linked Layers

Smart Object

What is a Smart Object?

Smart Objects are layers, that contain image data from raster or vector images such as Photoshop or Illustrator files.

Smart Objects preserve an image's source content, with all its original characteristics, enabling you to perform non-destructive editing to the layer. When you convert an image to a Smart Object, what you are effectively doing is saving the raw data about that image, within the Photoshop PSD file itself.

What is a Smart Object used for?

- Perform non-destructive transforms
- Work with Vector Data that would otherwise be rasterized in Photoshop
- Perform non-destructive filtering
- Edit one Smart Object and automatically update all it's linked instances
- Apply a layer mask that's linked or unlinked to the Smart Object layer
- Try various designs with placeholder images

What can we not do with a Smart Object?

- Perform operations that alter pixel data such as Painting, cloning, dodging and burning

Smart Object v Other Layers

What is a Smart Object?

Smart Objects preserve an image's source content, with all its original characteristics, enabling you to perform non-destructive editing to the layer. When you convert an image to a Smart Object, what you are effectively doing is saving the raw data about that image, within the Photoshop PSD file itself.

What is a Bitmap or Raster?

- Are also known as raster images, and these each consist of a fixed number of pixels, and are therefore resolution-dependent. Raster images can lose detail and appear jagged (pixelated) if they are scaled up

What is a Vector Graphic?

- Are made up of lines and curves defined by mathematical objects (vectors), and maintain crisp edges that lose no detail when resized because they are resolution-independence. This resolution-independence makes vector graphics a good choice for visual elements, such as logos, that will be used at various sizes.

What is a Linked Smart Object?

Linked Smart Objects are distinct from duplicated instances of a Smart Object within a Photoshop document. With Linked Smart Objects, you can use a shared source file across multiple Photoshop documents which is a familiar and welcome concept for web designers.
