Lesson 21 Powerful Enhancement Photoshop Automation

A person wearing a blue and white patterned jacket is holding a large white rectangular sign. The sign contains the word 'AGENDA' in large black letters, followed by a list of topics, each preceded by a blue square icon. The background is a plain, light-colored wall.

AGENDA

- ❑ Photomerge
- ❑ Photomerge
Commands
- ❑ High Dynamic Range
- ❑ True HDR
- ❑ Tone Mapping
- ❑ Photoshop “Faux” HDR
- ❑ Little Planets

Photoshop Automation

Photomerge

Photomerge Guidelines

Overlap Images Sufficiently

Images should overlap by approximately 40%. If the overlap is less, Photomerge may not be able to automatically assemble the panorama. If images overlap by 70% or more, Photomerge may not be able to blend the images. Try to keep the individual photos somewhat distinct from each other.

Use One Focal Length

If you use a zoom lens, don't change the focal length (zoom in or out) while taking your pictures.

Keep the Camera Level

Photomerge can process slight rotations between pictures, but a tilt of more than a few degrees can result in errors when the panorama is assembled. Using a tripod with a rotating head helps maintain camera alignment and viewpoint, or tap into your core strength and hold the camera steady.

Position Yourself Correctly

Try not to change your position as you take a series of photographs, so that the pictures are from the same viewpoint. Using the optical viewfinder with the camera held close to the eye helps keep the viewpoint consistent. Or try using a tripod to keep the camera in the same place.

Avoid using Distortion Lenses

Distortion lenses can interfere with Photomerge.

Maintain the Same Exposure

Avoid using the flash in some pictures and not in others. The blending features in Photomerge helps smooth out different exposures, but extreme differences make alignment difficult. Some digital cameras change exposure settings automatically as you take pictures, so you may need to check your camera settings.

Photomerge: Layout options

Auto

Allows Photoshop to assume what layout option should be applied

Perspective

This options uses the middle images as a point of reference.

Cylindrical

This options reduces “bow tie effect”. Overlapping is still matched.

Spherical

This options transforms and maps as if the images are inside a sphere.

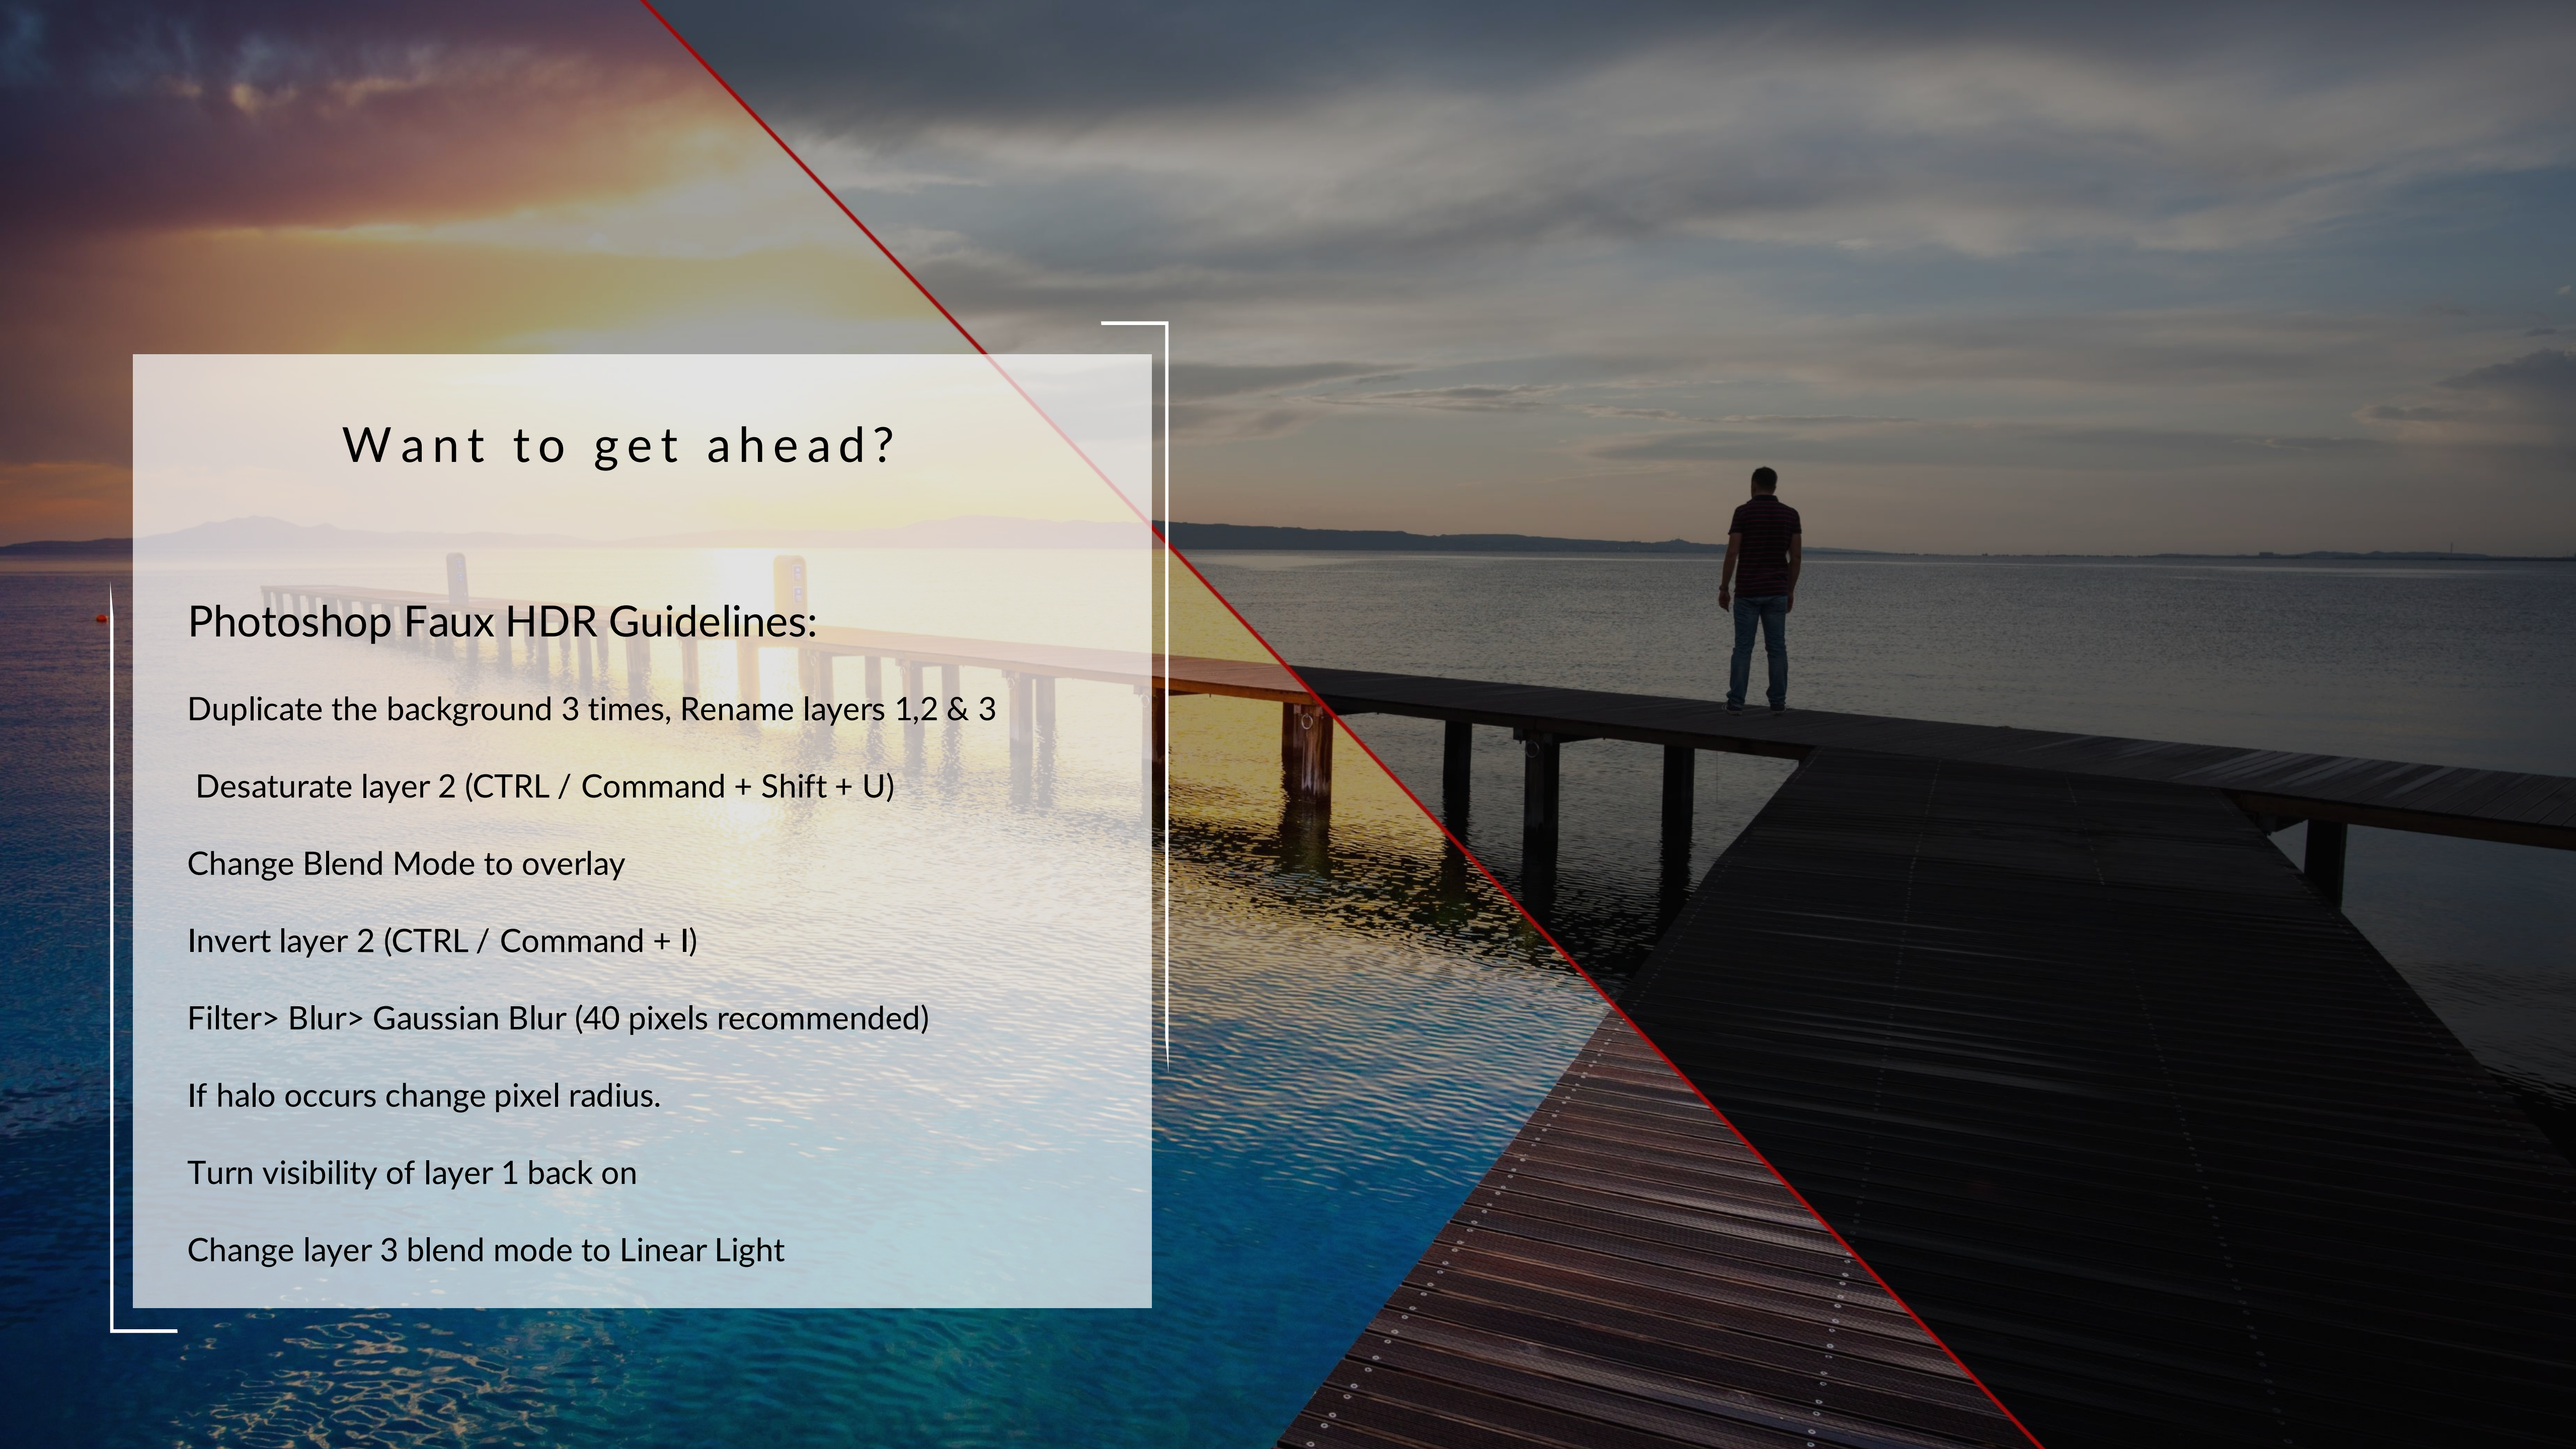

Collage

Aligns layers, matches content and transforms with rotate and scale.

Reposition

Aligns layers and matches content but does not transforms with rotate and scale

Want to get ahead?

Photoshop Faux HDR Guidelines:

Duplicate the background 3 times, Rename layers 1,2 & 3

Desaturate layer 2 (CTRL / Command + Shift + U)

Change Blend Mode to overlay

Invert layer 2 (CTRL / Command + I)

Filter> Blur> Gaussian Blur (40 pixels recommended)

If halo occurs change pixel radius.

Turn visibility of layer 1 back on

Change layer 3 blend mode to Linear Light
