- Metrics for various social media networks
- Reporting

Fun Fact

Did You Know:

90% of medium and large ***businesses have used social media*** in their ***marketing*** for the past five years, but nearly half of all marketers are ***unable to show the impact*** of their social media investments.

What is social analytics?

Social analytics is the collection and analysis of statistical data on how users interface with an organisation via social networks.

The importance of social analytics

Understand your target audience

Data analysis can help you to understand what content your audience likes and dislikes, what they engage with more as well as the ideal times to post - we discussed posting times and frequency in the last lesson - this is how you determine what times to post.

Your top performing networks

Analysing data can help you to identify which social media networks are driving the most conversions so that you can focus on the ones that are increasing your bottom line and eliminate the ones that are not.

Improve content and campaigns

When analysing your data you will be able to see what types of content (images, links or video) perform better as well as what design style on images or videos (such as animation, realistic) perform best.

Improve your social media strategy

Measuring your data can help you to identify what content strategies are working and which ones aren't allowing you adjust and focus on what is working instead of wasting time on creating and promoting strategies that aren't.

Actionable and vanity metrics

Actionable metric

An actionable metric is one that ties specific and repeatable actions to observed results.

Vanity Metric

A vanity metric is a metric that makes you look good to others, but that does not help you understand your own performance in a way that informs future strategies.

How to identify your metrics

In order to decipher whether your metrics are actionable or vanity metrics, ask yourself these questions.

1. What business decision can I make with this metric?

2. Is something due to correlation or causation?

3. Is the data accurately reflecting the truth?

Social media metrics

Facebook metrics

Actions on page

The number of clicks on your page's contact info and call to action button.

Page views

The number of times that a page's profile has been viewed by logged-in and logged-out users.

Page previews
