Lesson outcomes

- Facebook posting features
- Publishing tools
- Creator studio

Fun Fact

Did you know that Facebook accounts for 62% of social logins made by consumers to sign into the apps and websites of publishers.

Facebook Posting Features

Post photo/video

Click on the photo/video option > it will immediately open up the folders on your computer to allow you to upload a photo or video.

Once you have chosen your content it will bring you to a page where you can add your post copy and any emojis you may want to include > you can also add additional images to this using the square plus box > and then you can post directly from here.

There used to be an option to schedule your post from this point but this option has been moved to publishing tools.

Need a reminder on how to do this?

Rewatch lesson recording from 03:52 to 04:52.

Get messages

Click on the get messages button > it will automatically fill in your image, title and description based on your website meta data.

Definition: Website meta data

This is information that is on the backend of your website that tells search engines what the content on your website is about and is part of your SEO tasks – we will learn more about this in lesson 1 and 2 of module 4.

You can add your post copy, and as the feature name suggests – it will automatically put a send message call-to-action button on the right hand side of your content in order to prompt users to message you. You can then publish your post but you can also backdate it or save your post as a draft.

Need a reminder on how to do this?

Rewatch lesson recording from 04:57 to 05:56.

Check-in

You can also use the check-in feature. This is really useful for your business when you are attending an industry or business event to leverage your brand awareness off the back of their event.

When you click on the check in button it will bring you to a page where you can type the name of the event in the search box and it will come up – provided they have an event or business page on Facebook. And then you can write something about the event.

Need a reminder on how to do this?
Rewatch lesson recording from 05:56 to 06:46.

Live video

When you click on the live stream button it will provide you with a streaming page.
Before you go live:

- Check that you are sharing to the right page
- Write a video title
- Include the relevant keywords
- Add a description
- Choose crossposting if relevant
- Specify audience settings

Streaming options:

- Use a broadcaster software such as OBS (open broadcaster software) which is a free software that you can use – you would need to input the stream key into your software – you will probably want to use a persistent stream key if you stream live often.
- Paired encoders - this is a device or app that converts your content to digital format for live streaming.
- Computer camera - stream directly from your computer using your onboard camera.

Stream health:

Bit rate: size and quality of your video
Frame rate: the frequency at which consecutive images appear on display
Audit bit rate: the quality of your audio
Video resolution: display of distinct pixels in each dimension that can be displayed
Audio format: file format for storing digital audio data
Max resolution: 720 p
Max live duration: 8 hours

Polls for Live Video

You can create a poll that will go live during your video which is really awesome as you can use this to drive engagement from your audience.
Once you have inserted your question and added your options > click save.

Need a reminder on how to do this?

Rewatch lesson from 06:51 to 13:58.

Facebook events

When you click on events, it will use your cover photo as the main photo, but you can change it.

- Add event name (character limit of 64)
- Include a location
- Insert description about your event
- Add your category
- Select the frequency of the event
- Include start and end dates and times
- Add any co hosts
- Add any additional details, such as a schedule, keywords associated with your event
- Specify whether the event is child-friendly and whether there are any volunteer opportunities
- Include a confirmation
- Insert a link to where users can buy tickets
- Specify who can post to event page

Need a reminder on how to do this?

Rewatch lesson from 14:13 to 18:06.

Create an Offer

- Add image
- Specify type of offer
- Choose discount amount
- Add a description (Top of post)
- Include offer expiry date
- Where people can redeem it (online or in-store with promo code)
- Specify the call to action

Rewatch lesson recording from 18:11 to 20:05.

Feeling/Activity feature

This is really useful if you have a work celebration or if you are attending an event or conference or even travelling somewhere for work or even if you are feeling excited about a product launch – when you click on this option you will be able to choose your feeling or activity here and then write something about it. This helps to humanize your brand.

Need a reminder on how to do this?

Rewatch lesson recording from 20:25 to 20:15.

Tag products

You can do this with a straightforward product shot but you can also do this with lifestyle photos. This really helps to drive sales as users can see exactly what product you are featuring along with the price.

Click on tag products > it will automatically open up your computer folder to upload a photo > you will then get redirected to a page where you can add post copy > to tag your product click on the bag icon on your image > when you click on the relevant product you want to tag it will ask you type in your product name.

PLEASE NOTE: In order to use this feature on Facebook you need to set up your product catalogue.

You can also add multiple images and tag those products too. This will bring you back to your post creation page where you can also edit your photos with filters, crop the photo, add a text overlay, add alt text and even stickers! Once you are done you can click save > publish your post.
Need a reminder on how to do this?
Rewatch lesson from 20:15 min to 23:09 min.

Facebook Publishing Tools

Access publishing tools at the top menu item of your facebook page.

Menu items

- Stories: you cannot publish stories from here, but you can keep an archive of the stories that you have posted.
- Please remember that Facebook will not automatically activate this – you need to activate it yourself. If you click on the tab it will automatically provide you with prompts to follow in order to activate this feature.
- Posts: see all your published posts, scheduled posts, draft posts and expiring posts.
- Videos: see all your videos in the video library, as well as suggestions on which videos you can crosspost to other pages.
- Tools: this includes the creator studio and sound collection.
- Branded content feature: this is a really awesome feature that allows you to connect with creators for both Facebook and Instagram.
- Lead ads forms: the publishing tools allow you to create lead ad forms that drive users to complete forms – however this requires ad spend and setup which we will not be covering in this module.
- Shop: this allows you to view pending orders and orders from Facebook – again this needs to be set up.
- Events: you can view your published and archived events.

Rewatch lesson recording from 23:09 to 25:28.

Publishing posting features

In order to create a post you can click on the create button in the top right hand corner. This will open a page that looks like your original post creation page.

Photo/video

From publishing tools when you click on the photo/video option you now have the ability to choose from more options:

- Upload multiple photos: click on the option to upload multiple photos/videos > open your folders on your computer and choose the relevant image or video >type your post copy, add an emoji, add additional images or video content > the main difference here is that you can preview your post and you have the option to share now, schedule, backdate or save as a draft.
- Upload multiple videos: click on multiple videos > upload by either clicking on the upload button or dragging and dropping your content in > on this page you will see where the video will post to – the thumbnail – the title of your video – you can add a description for you video – add tags related to your video – and then there are a variety of other options - the first option allows you to choose where your post will appear – the second allows you to add subtitles and captions – the third allows you to create a 360 degree video mode – the fourth allows you to create a poll during your video – the fifth allows you to add tracking information and labels to manage your videos – the sixth option is when you want to monetise your videos, videos must be 180 seconds or longer – and the seventh icon allows you to detect matching videos where you can get notifications when a matching video is uploaded to monitor whether you own the content or keep an eye on your competitors, you are also able to see your upload status and the publishing status as well as edit your video.

- Create a photo album: upload a photo album > add an album name > you can do a roundup of photos – you can also include a location – use the dates from the photos or pick a date > add a description about each individual photo particularly if you use this for a product launch, a range of products, a work event or industry conference > you can add additional photos from the rectangular plus block or from the top right hand side button > you can also change the order of the photos by clicking the order by date taken button which will give you other options to choose the order of your photos but you can also drag and drop them in the order you want them in > once you are finished with your content you can click on the post button.
- Create a photo carousel: type your post copy > enter a destination URL > having added the URL it will automatically fill the image and meta description information for you, but it's not a carousel with only one image – so you need to add more images by clicking on the grey plus block > once you have uploaded your images you can untick your main image if it isn't what you want > include individual URLs for each of the images – this is really awesome if you want to showcase specific products or services and drive users to those individual landing pages > write individual copy for each image with a call to action.
- Create a slideshow: choose the aspect ratio you want – square, rectangle or vertical > set the image duration – how long do you want to focus on each image, you can choose between half a second to 5 seconds – go with about 2 to 3 seconds – any longer and people may not know there are more images and you can also choose a fade transition or none> add photos from the right hand side button or from the plus box on the bottom right > upload photos from your computer, take a photo or choose from photos that you have already published like a month in review type content. This is also really great for product launches or events, even office gatherings/ team building > add music or upload your own music > review > click on create slide show > add your post copy > set it to post now, schedule, backdate or save as draft, choose who sees it – preview it and then share or save.
- Create an instant experience: click on canvas > add various components with the top plus button or in the content block where it says add component – you can also name the experience – which I suggest you do if you ever want to be able to use it > when you click on add component you will get a list of options that you can use in your post > a call to action button, a carousel, photo, text, video or header > choose multiple elements to put together > click okay > add relevant information > click save and finish. Once your canvas is saved you can go back to your post page and then type in the name of your canvas to add it.

Brand collabs manager

Use this to find partners and get results from branded content campaigns.

- Home page: view featured creators - whether they are verified, number of followers, average engagement rate, view portfolio, recent branded posts, reach, impressions and engagements, as well as Instagram suggested creators.
- Search function: the search page allows you to filter creators by country, gender, age and interests – you can also specify criteria for creators based on their portfolio type or followers. Alternatively you can also search through creators by hashtag, keyword or creator name. This tab also shows trends and has suggested creators for you. Then you can see listed creators as well as their number of followers.
- Insights: search for a specific post, view the post by date published, platform or boosted status. If you analyse the insights you can see the post, what date it was published as well as the reach, impressions, engagement and boosted status.
- Creator lists: you may have different creators for different product or service categories. Create a new list > click on the create new list button > add the list name > click create. Once you have your list of creators you will be able to see the title of your list > add new creators > click on the list name > you can also view creators in your list, the partner types and when the list was last modified. You can export your list by clicking on the list name.
- Project briefs: create project briefs so that creators can find you > click on the create new project brief in the top right hand corner of the page > enter project title > click next

- Add information about your brand - the company description, brand guidelines and company website > include a project description > a topic or theme, application deadline, content delivery deadline, product or service details and the relevant product or service landing page > specify content details such as which platforms you want to make use of, the post type you are looking for and whether there is a compensation offer > reduce the number of applicants by being more specific about your target audience – outline the age of the audience, gender, interest and locations as well as specifying how many followers the creator must have in order to be eligible for your project > review the brief publish > view all applicants under the project brief tab at the top of the page.
- Partnerships: when you have partnerships you will be able to find them under the partnerships tab on the left side – from here you could also find a creator.
- Publishing tools: this tab allows you to choose between posts to review from your creators or a list of posts that you have tagged partners in.

Facebook Creator Studio

The creator studio was launched to make it easier to manage social media pages.

Home page

Write a post, upload a video and go live – it also shows you your most recent posts as well as the associated views and engagement of those posts. There are also additional insights for video on the right hand side such as minutes viewed, 1-minute video views, net followers and engagement. In order to create a post you can click on the top left hand side create button and you will get the option to create a post, upload a video, upload multiple videos, go live or post a video across pages.

Content library

View all your posts, videos you can cross post to other pages, your video playlists and timeline posts – you can also filter by post type if you are looking for specific content, by post status, you can select a date range to filter your posts by and there are additional filters that you can use.

Above that you can also do a quick search by all posts, all published posts, scheduled posts, drafts, expired and expiring posts. On posts you can see the post itself with the image/video and copy – you can also see the post status – the date of the post – boost details – distribution score which tells you how your posts are performing compared to your historical average – as well as 1-mi video views – and if you scroll to the right you can see 3-second video views and engagement.

Insights

Performance insights: select a date range – see the video minutes viewed, 1- minute video views – 3- second video views – engagement and net followers – you are also able to break down your data by organic and paid, posted, crossposted and shares or live and video. At the bottom you can also view your top videos and top page.

Loyalty insights: you can get an idea of your net followers, returning viewers and complete views which is the number of users that have at least watched 97% of your video – you are also able to view your follower activity with new followers versus people who unfollowed. You can also look at your returning viewers and if you hover over the bars it will provide you with more information on returning vs total viewers. Under that you are able to see the top videos by returning viewers with additional information such as the date the video was added, the number of returning viewers, 1- minute video views, total minutes viewed and average minutes. This is really useful information to determine whether your content is making an impact or not.

Audience insights: this is wonderfully helpful for further refining your buyer personas as well as seeing if you are producing content that your audience is interested in. You are able to see your engaged viewers – 1-minute viewers and new followers – you can also break them down by an age and gender comparison together or alternatively only age or only gender. Scroll down – you will see a breakdown of your top audiences which you can filter by age and gender, age alone, gender alone, location and language – for each of these you can see how engaged your viewers are, the number of new followers and 1 minute viewers.

Retention insights: see how long people are watching for by 3-second views, 15 second views and 1 minute views – you can break this data up into a bar graph, line graph or a percentile representation – and then there is additional information on your videos which you can break down by all, recommendations, shares and followers all of which will list the videos, date added, show you the audience retention, 1-minute video views, minutes viewed and average minutes viewed. With all this information at your disposal you can really optimise your content to get the best return on investment (ROI)!

Inbox

Within the creator studio you can also manage your inbox – you can manage your messenger, facebook, Instagram and direct messages all from one place. You can assign conversations to team members, this is really useful if you have a lot of different departments – choose a person from a department to be responsible for assisting with answering social media questions – this is also where it's so useful to have a social media policy so that everyone carries through the same brand voice in all social comms as well as prepared answers as much as possible. You can also delete conversations (which I wouldn't suggest as you want to keep a track record of online conversations), you can also mark messages as spam, mark as unread, star messages will make a notification to follow up and then once the customer is satisfied you can move to done in order to keep your inbox clean. You are also able to assign labels to your message which helps a lot for your customer journey – you can see what kind of questions they are asking at each stage by marking them as new customers/returning customers or however you would like to segregate your customers.

Sound collection

The sound collection is a library of sound that you can use for your content creation – you have access to tracks and sound effects that you can download. You are also able to search for a specific track or filter by genre, mood, duration or vocals.

Pages

As a social media manager you are able to manage all your pages from the last tab – you can see a list of all your pages as well as create a new page from here or add a person to one of your pages.
