Fun Fact

6 out of 10 people prefer online video platforms to live TV.

YouTube Posting Features

Getting started with YouTube

To post to YouTube you will need to go to the creator studio > click on your profile icon > click on your channel > click on YouTube Studio top right.

From the creator studio you can either choose to create from the create button in the top right hand corner of your page – this will provide you with a drop down menu – where you can choose to upload your video, go live or create a post – but you can also do this with the top right hand side icons – upload – go live - or write a post.

Want to recap this?
Rewatch lesson recording from 01:33 to 02:26.

Upload a video

Click on the upload button > select your file > include a title with a description > select your thumbnail > add your video to a specific playlist > set the audience > more options > tell YouTube whether someone has paid to show a product or service in your video – or if you want to add a message to your video to inform viewers of paid promotions – add tags – upload subtitles > state *certification > include the date of recording > add location > set the **license and distribution settings > allow embedding publishing to subscriptions feed and notify subscribers > specify category > set your comments and ratings > choose to show viewers likes and dislikes > click next > add an end screen and add cards > post.
*Certification is required if your content aired on US television or after 30 September 2012.
** License and distribution – you can choose between a standard youtube license which is the default video license type in YouTube and means that no one is allowed to download, modify or redistribute the videos- or the creative commons license which grants permission for users to use videos, edit them and redistribute.

Need a reminder on how to do this?
Rewatch lesson recording from 02:26 to 13:46.

Live Streaming

WebCam
Click on streaming icon > this will open a streaming window under the webcam tab > create a title for your live stream > set the visibility of your video > schedule for a later (if necessary) > set the audience > more options > add a description > advanced settings > set allow chat > specify whether the video contains paid promotion such as paid product placement, sponsorships or endorsements > click back arrow > click stream now > SMILE for screenshot > click on go live.

Stream with encoding software
Click on Stream > create a title > set the visibility of your video > insert a video description > schedule for later (if necessary) > upload custom thumbnail > set audience > create stream > past stream key into software > click done > click on settings icon top right > allow embedding > enable live chat > allow live chat to replay > enable slow mode > click save > go live. Access live streams under *Manage* .

Need a reminder on how to do this?
Rewatch lesson recording from 13:46 to 20:39.

Create a post

Click on create post icon > add post copy > add video, image or create a poll > click post.

Need a reminder on how to do this?
Rewatch lesson recording from 20:39 to 21:57.

Before you shoot

Choosing equipment

Visuals

- Point and shoot: cheaper, lightweight and simple to use, it's really good for quick shoots and everyday vlogging
- DSLR: more expensive but it gives you a more cinematic look – it is heavier and also has interchangeable lenses
- Smart phone: won't give you the same quality as a DSLR, but it is a good option if you do not have a lot of money to spend on equipment and you want to start posting now

Sound

- Camera onboard sound: it is always best to sit about 3 or 4 feet from the camera so that your sound doesn't distort, but you will definitely need to test the sound quality beforeposting
- Shotgun or standalone mic: if your camera has a port to connect a mic then you can- attach it to the camera – these mics are directional so it will pick up sound wherever the mic is pointed
- Lavalier mic: provides a wider range of sound if you need to be further away from the camera or if you shoot in noisy environments

Lighting

- Softbox: using LED or fluorescent lights (these do not create as much heat as incandescent lights) and create a soft light which diffuses the light and is more flattering when filming faces
- Ring light: highlights the face and is also very flattering
- Natural lighting: sit near a window to light up face, be careful with this as your background may become very dark, when shooting outdoors be aware that the sun can cause very harsh shadows which is not too flattering, you are also limited to the times that you can shoot

Editing

- Free software: iMovie, Windows movie maker
- Paid software: Adobe Premier Pro, VideoPad Video Editor

Developing your ideas

- Tell your story
- Brainstorm your content
- Narrow down your ideas
- Build the story out
- Why are you posting this video?
- Will it appeal to your target audience?
- How is it useful to them?
- Rehearse before shooting

Getting ready to shoot - Checklist

❑ **Location:** consider lighting/sound//weather/transport/power outlets/permissions/ privacy
❑ **Video:** backgrounds/clothing and accessories/ brand
❑ **Test equipment:** camera, lights and mics are working/camera resolution and settings/pack and label equipment/charge batteries and pack power cords/have backups of batteries, memory cards and hard drives
❑ **Workflow:** talking points/script/schedule (call sheet) or shot list

During your shoot

Framing shots

- **Rule of Third:** divide the frame vertically and horizontally into thirds, placing your subject at the intersection of the lines
- **Balance:** place subjects in equal weight within the frame
- **Depth:** focus on the foreground, midground or background to give each moment ther right look and feel

Types of shots

- **Wide angle shots** : these are long distance shots that help set up the scene and give the viewer context
- **Medium shots:** these shots are all-purpose and can direct the focus of the viewer to what's coming next
- **Close-up shots:** hone in on personal conversations or on the subject without distractions

Camera movement

Zooming: start from far and get closer to the subject
Panning: moving horizontally to give the video motion

Getting the best shots

- Shoot multiple takes
- Make notes on takes
- Keep spares close at hand

Lighting

Use the available lighting effectively, lighting can affect:

- Mood
- Look

Consider the types of lighting:

- **Key light:** main light which highlights the subject
- **Fill light:** additional lighting that reduces contrast to fill dark spaces
- **Back light:** light up subject from the back

Evaluate light intensity - how bright or dim are your lights and how does this affect the mood and look of your video.

Sound

- Plan shoots with sound in mind
- Location – consider background noise
- Recording room – consider acoustics
- Check microphone connection
- Keep microphone close to audio source
- Test and monitor sound

After your shoot

Editing

- Keep editing in mind when you shoot
- Implement an editing workflow
- Get familiar with your software
- Edit for pace
- Test on your audience

Identifying the right tools

When starting out, use free software and get used to editing video and using the software.
When choosing the right editing software, consider:

- Your available budget
- The equipment that you have
- The features of the software

YouTube best practices

Shareable content

- Leverage trending subjects
- Target your audience through emotion
- Convey core beliefs and values
- Create ongoing series

Collaborate

- Use the right collaborator
- Be original
- Be authentic

Discoverability

- Create content around trending events
- Create evergreen video content
- Optimise your metadata
- Make use of keywords

Top Tip

YouTube Trends Dashboard. Use the YouTube trends dashboard to search for popular videos

Accessibility

- Keep first time viewers in mind when producing content
- Provide contextual information but refrain from mentioning videos the user may not have seen
- For series, include a quick recap of the previous video

Consistency

- Have a consistent format that you use
- Post regularly
- Keep dominant elements consistent intros, outros, etc
- Keep brand voice, tone and character consistent

Targeting

- Gear your content towards the audience you are trying to target
- Look at content that is similar to yours
- Examine your existing audience
- Check your current content

Sustainability

- Plan your content for longevity
- Ensure that you have the resources to sustain video content creation
- Use a predictable programming schedule

Conversational

- Emotionally connect with your audience
- Ask questions, ask for feedback or comments
- Respond to comments

Interactive

- Share viewer questions and comments
- Think of ways in which your audience can interact with your content
- Drive user generated content

Authentic

- Include subject matter experts or industry professionals in your videos
- Showcase real-life fan stories
- Tell your brand backstory

YouTube Community Guidelines

- Sex and nudity
- Hate speech
- Spam
- Firearms
- Harmful and dangerous
- Child safety
- Violence or criminal organisations
- Illegal or regulated goods and services
- Harassment
