Posting to LinkedIn

Text post

From the LinkedIn homepage underneath the profile and cover photo section there is the option to start a post.

Click on Start a post > add your copy > add relevant hashtags > post

LinkedIn provides you with hashtag suggestions related to the keywords it identifies in your post. Remember to only use the most relevant hashtags for that post.

You can also include a link in your post - this will automatically pull the metadata through from the site link and populate your post with an image and a headline, provided that the metadata for that link has been set up on the website. You are able to change the image and title. You can then remove the link from your post and the relevant information will stay. The title of the post will direct users to the website link.
